SECURITIES AND EXCHANGE COMMISSION
Washington, D.C. 20549

FORM 10-K

(Mark one)

ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the fiscal year ended December 31, 2016

TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the transition period from _____ to _____

Commission file number 001-34170

MicroVision, Inc.

(Exact name of registrant as specified in its charter)

Delaware

(State or Other Jurisdiction of Incorporation or Organization)

91-1600822

(I.R.S. Employer Identification Number)

6244 185th Avenue NE, Suite 100

Redmond, Washington 98052

(Address of Principal Executive Offices, including Zip Code)

(425) 936-6847

(Registrant's Telephone Number, including Area Code)

Securities registered pursuant to Section 12(b) of the Act:

Title of class
Common Stock, \$0.001 par value per share

Name of exchange on which registered
The NASDAQ Stock Market LLC

Securities registered pursuant to Section 12(g) of the Act:

None

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes No

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. Yes No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate website, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files. Yes No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K (§229.405 of this chapter) is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer or a smaller reporting company. See definitions of "large accelerated filer," "accelerated filer" and "smaller reporting company" in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer Accelerated filer Non-accelerated filer Smaller reporting company
(Do not check if a smaller reporting company)

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Act). Yes No

The aggregate market value of the common stock held by non-affiliates of the registrant as of June 30, 2016 was approximately \$87.0 million (based upon the closing price of \$1.68 per share for the registrant's common stock as reported by the NASDAQ Global Market on that date).

The number of shares of the registrant's common stock outstanding as of February 27, 2017 was 68,122,000.

Documents Incorporated by Reference

Portions of the registrant's definitive Proxy Statement to be filed with the Securities and Exchange Commission pursuant to Regulation 14A in connection with the registrant's 2017 Annual Meeting of Shareholders (the "2017 Proxy Statement") are incorporated herein by reference in Part III of this Annual Report on Form 10-K to the extent stated herein.

MICROVISION, INC.
ANNUAL REPORT ON FORM 10-K
FOR THE YEAR ENDED DECEMBER 31, 2016

PART I

Preliminary Note Regarding Forward-Looking Statements

This Annual Report contains forward-looking statements, within the meaning of Section 27A of the Securities Act of 1933, as amended (the "Securities Act") and Section 21E of the Securities Exchange Act of 1934, as amended (the "Exchange Act"), and is subject to the safe harbor created by those sections. Such statements may include, but are not limited to, projections of revenues, income or loss, capital expenditures, plans for product development and cooperative arrangements, technology development by third parties, future operations, financing needs or plans of MicroVision, Inc. ("we" or "us"), as well as assumptions relating to the foregoing. The words "anticipate," "could," "would," "believe," "estimate," "expect," "goal," "may," "plan," "project," "will," and similar expressions identify forward-looking statements. Factors that could cause actual results to differ materially from those projected in our forward-looking statements include risk factors identified below in Item 1A.

ITEM 1. BUSINESS

Overview

MicroVision, Inc. is a pioneer in laser beam scanning (LBS) technology that we market under our brand name PicoP®. We have developed our proprietary PicoP® scanning technology that can be adopted by our customers to create high-resolution miniature projection and three-dimensional sensing and image capture solutions. PicoP® scanning technology is based on our patented expertise in micro-electrical mechanical systems (MEMS), laser diodes, opto-mechanics, and electronics and how those elements are packaged into a small form factor, low power scanning engine that can display, interact and sense, depending on the needs of the application. For display, the engine can project a high-quality image on any surface (pico projection), a windshield (head-up display or HUD), or a retina (augmented reality or AR). For sensing, we use infrared (IR) lasers to capture three-dimensional data in the form of a point cloud. Interactivity uses the 3D sensing function and the display function to project an image that the user can then interact with as one would a touch screen.

We have licensed our patented PicoP® scanning technology to other companies for incorporation into their scanning engines for projection. We sell our licensees key components needed to produce their laser scanning engines and/or license our technology in exchange for a royalty fee for each scanning engine they sell. Companies to whom we license our PicoP® scanning technology are typically original design manufacturers (ODMs) or original equipment manufacturers (OEMs) who are in the business of making components or products ready for sale to end users. To date, we have primarily focused on the consumer electronics market, however, we believe that our LBS technology creates a platform that can support multiple applications and markets including enterprise, medical, industrial and automotive.

In November 2016, we announced a growth strategy for 2017 and beyond that includes selling LBS engines to ODMs and OEMs in addition to our strategy of licensing LBS technology to licensees to offer their own solutions. We plan to offer three scanning engines to support a wide array of applications: a small form factor display engine for consumer products, an interactive display engine for smart Internet of Things (IoT) products, and a mid-range light detection and ranging (LiDAR) engine for autonomous vehicles, industrial products and robotics.

While we are optimistic about our technology and the potential for future revenues, we have incurred substantial losses since inception and we expect to incur a significant loss during the fiscal year ending December 31, 2017.

MicroVision, Inc. was founded in 1993 as a Washington corporation and reincorporated in 2003 under the laws of the State of Delaware. Our headquarters is located at 6244 185th Avenue NE, Suite 100, Redmond, Washington 98052, and our telephone number is (425) 936-6847.

Our annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K, and all amendments to those reports are available free-of-charge from the investor page of our website, accessible at www.microvision.com, as soon as reasonably practicable after such material is electronically filed with the Securities and Exchange Commission (SEC). Copies of these filings may also be obtained by visiting the Public Reference Room of the SEC at 100 F Street NE, Washington, D.C. 20549, or by calling the SEC directly at 1-800-SEC-0330 (1-800-732-0330). In addition, the SEC maintains a website, www.sec.gov, which contains current, quarterly and annual reports, proxy and information statements and other information regarding issuers that file electronically.

Technology

Our patented PicoP® scanning technology combines a MEMS scanning mirror, laser diode light sources, electronics, and optics that are controlled using our proprietary system control algorithms. The bi-directional MEMS scanning mirror is a key component of our technology platform and is one of our core competencies. We also have patents for two mirror MEMS solutions. Our most recent MEMS design is a silicon device with a one millimeter mirror at the center. This mirror is connected to small flexures that allow it to oscillate vertically and horizontally to capture (sensing) or reproduce (display) an image pixel-by-pixel. Scanning engines with our technology can operate in three modes: display only, display and sensing combined, and sensing only. For applications that include a projected display, our PicoP® scanning technology creates a brilliant, full color, high-contrast, uniform image over the entire field-of-view from a small and thin engine with low power consumption. For 3D scanning applications, our engine is also small, high resolution, and low power with the low lag and low persistence features that are important for such applications. We believe that our proprietary technology offers significant advantages over traditional display and 3D sensing systems. Depending on the specific product application, these advantages may include:

- Ability to perform projection and three-dimensional sensing and image capture from a single device;
- Leveraging our custom MEMS and application-specific integrated circuits (ASICs) components across multiple engine types for economies of scale;
- Focus-free operation;
- HD resolution;
- Low power requirements to enable battery operated devices and applications;
- Large screen size up to 200 inches from short distances;
- Small and thin engine size;
- 80,000:1 contrast ratio with true black;
- High-brightness, high-dynamic range, and brightness uniformity;
- Rich, saturated color reproduction;
- Short throw projection with multi-mode operation for table top and wall mode;
- 3D sensing as a touch interface or point cloud;
- Real-time interactive capture of moving targets;
- Dynamic, programmable resolution and frame rate 3D scanning; and
- Expandable 90, 180, 270 and 360 degree coverage for LiDAR applications.

In addition to these advantages, an overarching benefit of our PicoP® scanning technology is its ability to offer a key combination of lumens per-watt per-cubic centimeter: in essence, more lumens at lower power in a smaller form factor. Competing technologies may offer more lumens in total but not in as small and power efficient design as our PicoP® scanning technology. This combination is of particular importance for small, portable devices operated by battery. Equally important for consumer ease-of-use and for mobile projection applications is the focus-free attribute of our PicoP® scanning technology.

Business Strategy

Our business strategy is to commercialize our PicoP® scanning technology by enabling ODMs and OEMs to produce end-user products via three go-to-market paths:

- Design and sell LBS engines directly to ODMs and OEMs to incorporate inside their products;
- License our LBS technology and sell key components to ODMs and OEMs to create their own scanning engines; and
- License LBS technology to ODMs and OEMs who developed their own key components.

By providing these options, we permit ODMs and OEMs to integrate and embed our technology across a broad range of display and 3D sensing product applications in the way that best matches their technical capabilities and timelines for bringing their products to market. We create product concept reference designs to enable ODMs and OEMs to develop and rapidly build products that capitalize on the benefits of our PicoP® scanning technology for many of the applications we promote for our technology. We are also developing value-added features intended to help our customers differentiate their potential products.

We pursue cooperative marketing and development relationships with suppliers and other companies interested in growing the LBS market to extend the reach of our team and strengthen our position in the market. In 2016, we announced a co-marketing relationship with ST Microelectronics that includes joint sales and marketing activities for LBS solutions.

The key elements of our business strategy include the following:

- Continue to improve the performance of our PicoP® scanning technology platform by advancing the key application attributes such as higher brightness for displays, lower power, smaller size, and greater accuracy and longer distances for 3D sensing;
- Develop value-added features and applications that complement our core technology;
- Partner with ODMs and OEMs to help them develop scanning engines based on our technology or to select an engine to purchase from our offerings, and to help them integrate the engines into their products;
- Support ODMs and supply partners to ensure availability of high quality scanning engines in quantities to support the consumer electronics market;
- Supply scanning engines for ODMs and OEMs who opt to buy rather than build engines as licensees for their products;
- Supply key scanning engine components for products being developed by ODMs and OEMs who license our PicoP® scanning technology and/or license rights to ODMs and OEMs to produce such components;
- Partner with other companies that are interested in growing the LBS market to cooperatively promote our solutions and develop solutions for future products and capabilities where appropriate; and
- Maintain a position of LBS leadership with our intellectual property around our PicoP® scanning technology.

Markets for Our Technology

Our PicoP® scanning technology platform strategy is focused on addressing four primary market segments:

- Pico projection/interactive pico projection;
- 3D sensing for automotive and industrial applications;
- Augmented/Virtual Reality (AR/VR); and
- Head up displays (HUD) for automobiles.

We see pico projection, interactive pico projection and short range 3D sensing as the most promising applications for our technology in the near to mid-term. We expect AR/VR and HUD to be mid to long-term opportunities. We have concentrated on pico projection over the past several years and, in 2016, we announced plans for other engine solutions for interactive pico projection and 3D sensing. We also began a development program in late 2016 with a leading technology company for an advanced driver assistance system (ADAS) proof-of-concept demonstrator. We believe AR and VR eyewear displays can also benefit from our technology, and we are actively exploring these opportunities. In 2016, we were engaged by another leading technology company to develop a proof-of-concept demonstrator for an AR application. In the automotive HUD market, we have supported customer evaluations for an LBS HUD.

In pico projection, our goal is to enable a large screen viewing experience produced by a small projector for mobile devices such as smartphones, tablets and other consumer electronics products. The scanning engine can either be embedded in the mobile device directly or in a small standalone companion product that is paired with the mobile device wirelessly or via a protocol such as HDMI. These potential products would allow users to watch digital videos, play games, and display images and other data onto a variety of surfaces, freeing users from the limitations of a small screen. Products that incorporate our PicoP® scanning technology have been announced and brought to market by our licensees and their customers in 2016.

We believe combining interactivity with projection can enable a whole new category of smart IoT products. Our engine, which combines interactivity and projection in a single, integrated module supports time-of-flight (ToF) 3D sensing, can act as a touch interface with the projected image, mimicking the experience users are accustomed to with a smartphone or tablet touchscreen.

For the automotive market, an engine using our PicoP® scanning technology could be combined with other components and systems to form a HUD system to be embedded into a vehicle or integrated into a portable, standalone aftermarket HUD. We have produced prototypes that demonstrate the ability of PicoP® scanning technology to project high-resolution virtual images in the driver's field-of-view, providing the driver with a variety of information related to the vehicle's operation. The small form factor display engine we plan to offer in 2017 is well suited to aftermarket HUD products.

We have also begun to investigate opportunities to apply our technology to emerging applications for in-car connectivity and infotainment systems and our mid-range LiDAR engine can be integrated into autonomous vehicles and vehicle ADAS applications for 3D special measurement and navigation assistance.

Another possible application area for our PicoP® scanning technology that we have refocused on in the past year is eyewear displays, also known as AR and VR. We have a long history with this application, and the eyewear ecosystem has progressed to a point where we see future growth opportunities. We are in the exploratory phases with prospective customers in identifying which AR and VR applications offer the most promise for our technology inside their future products.

In addition to display and projection applications, our PicoP® scanning technology has the ability to capture and sense three-dimensional information. We believe there are market opportunities to use our technology to capture images and sense objects. There are multiple methods of performing 3D image capture and sensing using our LBS technology. The first we plan to commercialize is time of flight (ToF), which we are incorporating into our interactive display engine as well as our mid-range LiDAR engine. In addition to the automotive applications discussed above, the mid-range LiDAR engine could enable machine vision for robots, drones, industrial vehicles, and applications.

Products and Services

In 2015 and 2016, our revenue was primarily derived from the sale of our proprietary components and license and royalty fees for PicoP® scanning technology. The key components we offer for inclusion in an LBS engine are our MEMS and ASICs. Our licensees can purchase none, some, or all of the key components we offer depending on their capability and desire to manufacture them and the terms of the licensing agreement.

Our planned 2017 engine product offerings are targeted to a wide variety of ODMs and OEMs for multiple applications, and they consist of:

- A small form factor, high definition display engine for applications where form factor and flexibility of product design are required;
- An interactive display engine that integrates display and 3D sensing to allow the user to interact with projected images; and
- A mid-range LiDAR engine for autonomous, industrial products and robotics.

We began delivering samples of the display engine to customers in December 2016 and expect to be ready for mass production with that engine in the second quarter of 2017. For the interactive display engine, we expect to begin delivering engine samples in the second quarter of 2017 with mass production readiness in the third quarter. We anticipate having samples of the mid-range LiDAR engine in the second half of 2017 and be mass production ready in the first half of 2018.

In addition to product sales and license and royalty fees, we generate revenue from engineering services for custom development and support services for our customers. Historically, our engineering services from collaborative research and development and contract agreements have been a significant portion of our total revenue. In 2015, we transitioned our business to focus more to product sales and royalty revenue, and engineering services has become a smaller part of our business. We expect product sales and royalty revenue to be a significant portion of our total revenue in the future.

Research and Development

We believe our research and development efforts have earned us a leadership position in the field of LBS technology and applications as applied to consumer electronics, automotive and other markets. Our ability to attract customers and grow revenue will depend on our ability to maintain our LBS technology leadership, to continually improve performance, reduce costs, reduce the size of component parts and scanning engines, and to increase the number of applications and products enabled by our PicoP® scanning technology.

Our research and development team is located in Redmond, Washington and as of December 31, 2016, was comprised of 49 engineering and technical staff in optics, computer vision, software engineering, electrical engineering, and MEMS design.

Sales and Marketing

Our sales and marketing approach is account based, business-to-business targeting of ODMs and OEMs. We license our PicoP® scanning technology and sell components used in the production of scanning engines to our licensees and sell scanning engines to our customers. Our customers are typically companies that want to buy or build LBS engines for incorporation into their products. We also engage end product manufacturers and retailers in our target markets to educate them about product opportunities based on our PicoP® scanning technology.

We currently have sales and business development representatives based in the United States and several parts of Asia, focused on business development in the Americas, Europe and Asia. Our sales and business development representatives are supported by a technical sales engineering team that assists customers during the "design win" and "design in" cycles. The technical sales engineering team operates from Redmond, Washington, Taiwan and Japan. Our marketing team is located in Redmond, Washington. We engage potential customers directly, participate in trade shows, use social media, and maintain a website and cooperate on co-marketing activities with key partners.

Manufacturing

We currently use contract manufacturers to produce the products we sell. Our products include scanning engines as well as components that are integral to a scanning engine incorporating our PicoP® scanning technology and include MEMS and ASICs that incorporate our designs and are produced to order by semiconductor foundries.

In addition to our business of licensing technology and selling components, beginning in 2017, we expect our product offerings to include scanning engine products manufactured by a contract manufacturer based on our proprietary design.

Our manufacturing is not currently subject to seasonal variations as our shipments have been relatively small and are in the early stages of product introduction. In the future, depending on our customers' product mix, we may be affected by seasonal fluctuations which could affect working capital demands.

We provide forecasts that allow our contract manufacturers to stock component parts and other materials and plan capacity. Our contract manufacturers procure raw materials in volumes consistent with our forecasts, manufacture and/or assemble the products and perform tests according to our specifications. Products are either shipped to our customers or shipped to our Redmond, Washington headquarters to be inventoried as finished goods. We procure some specific components and either sell them or consign them to our contract manufacturers. We hold some inventories of these components. Our contract manufacturers procure additional raw materials we do not own when the finished goods are completed by our contract manufacturer. Title to the products transfers from our contract manufacturers to us and then to our customers upon shipment from the manufacturer. If raw materials are unused, or the products are not sold within specified periods of time, we may incur carrying charges or obsolete material charges for component parts that our contract manufacturers purchased to build products to meet our forecasts or customer orders.

Many of the raw materials used in our components are standard to the consumer electronics industry. Our MEMS, MEMS die, and ASICs are currently manufactured to our specifications by separate single-source suppliers.

Human Factors, Ergonomics and Safety

We work with third party independent experts in the field of laser safety to assist in meeting safety specifications. In addition, we monitor developments in the area of permissible laser exposure limits as established by International Electrotechnical Commission (IEC) and others. Independent experts have concluded that laser exposure to the eye resulting from use of LBS devices under normal operating conditions would be below the calculated maximum permissible exposure level set by the IEC.

Competitive Conditions

The information display and 3D sensing industries are highly competitive. Potential products incorporating our PicoP® scanning technology, including any LBS engines we develop, will compete with manufacturers of established technologies, such as flat panel display devices, as well as companies developing new display and 3D sensing technologies.

Our competitors include companies such as Texas Instruments, Intel, Syndiant, Velodyne, Quanergy, Innoluce, Opus, Mirrorcle, Maradin, Himax, Pioneer, Sony (LCOS) and others, some of which have much greater financial, technical and other resources than us. Many of our competitors are currently developing alternative miniature display and 3D sensing technologies. Our competitors may succeed in developing innovative technologies and products that could render our technology or our proposed products commercially infeasible or technologically obsolete.

Pico projectors are a class of miniaturized projectors that are generally handheld, battery operated, mobile projectors. Most of the competing projectors currently on the market are either liquid crystal on silicon (LCOS) panel solutions or Texas Instruments' DLP™ display technology primarily using light-emitting diode (LED) light sources. Each of these projection solutions can create images of varying resolution, brightness, image quality, battery life, and ease-of-use.

The information display and 3D sensing industries have been characterized by rapid and significant technological advances. Our PicoP® scanning technology platform and potential products may not remain competitive with such advances, and we may not have sufficient funds to invest in new technologies, products or processes. Although we believe our technology platform and proposed products could deliver images of a substantially higher quality and resolution from a smaller form factor device than those of commercially available LCOS and DLP based display products, manufacturers of competing technologies may develop further improvements to screen display technology that could reduce or eliminate the anticipated advantages of our proposed products.

3D sensing is a new market for us and we believe we are developing products that will have cost and performance benefits over what competitors may offer. However, manufacturers of competing technologies may develop further improvements to size of their modules, performance for mid-range LiDAR and lower costs that could reduce or eliminate the anticipated advantages of our proposed products.

Intellectual Property and Proprietary Rights

We create intellectual property from three sources: internal research and development activities, technology acquisitions, and performance on development contracts. The inventions covered by our patent applications generally relate to systems controls in our PicoP® scanning technology, component miniaturization, power reduction, feature enhancements, specific implementation of various system components, and design elements to facilitate mass production. Protecting these key-enabling technologies and components is a fundamental aspect of our strategy to penetrate diverse markets with unique products. As such, we intend to continue to develop our portfolio of proprietary and patented LBS technologies at the system, component, and process levels.

We believe our extensive patent portfolio is the largest, broadest, and earliest filed LBS technology portfolio and includes applications such as automotive HUD, augmented reality, range finding, portable media devices, image capture, and projection applications. We have over 500 issued patents, pending patents and licensed patents worldwide.

Since our inception in 1993, we have acquired under license agreements exclusive rights to various LBS technologies, including, among others, rights related to the ability to superimpose images on the user's field-of-view with a retinal display, and rights related to the design and fabrication of micro-miniature devices using semiconductor fabrication techniques. In some cases, the licensors have retained limited, non-commercial rights with respect to the technology, including the right to use the technology for non-commercial research and for instructional purposes.

Our ability to compete effectively in the information display and 3D sensing markets may depend, in part, on our ability and the ability of our licensors to maintain the proprietary nature of these technologies.

We also rely on unpatented proprietary technology. To protect our rights in these areas, we require all employees, and where appropriate, contractors, consultants, advisors and collaborators, to enter into confidentiality and non-compete agreements. There can be no assurance, however, that these agreements will provide meaningful protection for our trade secrets, know-how or other proprietary information in the event of any unauthorized use, misappropriation or disclosure of such trade secrets, know-how or other proprietary information.

We have registered the name "PicoP®" and "MicroVision®" with the United States Patent and Trademark Office.

Employees

As of February 27, 2017, we had 81 full-time employees. None of our employees are represented by a labor union.

ITEM 1A. RISK FACTORS

You should carefully consider the risks described below together with the other information set forth in this report, which could materially affect our business, financial condition and future results. The risks described below are not the only risks facing our company. Risks and uncertainties not currently known to us or that we currently deem to be immaterial also may materially adversely affect our business, financial condition and operating results.

Risk Factors Related to Our Business and Industry

We have a history of operating losses and expect to incur significant losses in the future.

We have had substantial losses since our inception. We cannot assure you that we will ever become or remain profitable.

- As of December 31, 2016, we had an accumulated deficit of \$499.8 million.
- We incurred consolidated net losses of \$450.7 million from inception through 2013, \$18.1 million in 2014, \$14.5 million in 2015, and \$16.5 million in 2016.

The likelihood of our success must be considered in light of the expenses, difficulties and delays frequently encountered by companies formed to develop and commercialize new technologies. In particular, our operations to date have focused primarily on research and development of our PicoP® scanning technology platform and development of demonstration units. We are unable to accurately estimate future revenues and operating expenses based upon historical performance.

We cannot be certain that we will succeed in obtaining additional development revenue or commercializing our technology or products. In light of these factors, we expect to continue to incur significant losses and negative cash flow at least through 2017 and likely thereafter. We cannot be certain that we will achieve positive cash flow at any time in the future.

We will require additional capital to fund our operations and to implement our business plan. If we do not obtain additional capital, we may be required to curtail our operations substantially. Raising additional capital may dilute the value of current shareholders' shares.

Based on our current operating plan, and without additional proceeds from the sale of shares under our existing Common Stock Purchase Agreement or At-the-Market (ATM) facility discussed in Note 8 to our financial statements, we anticipate that we have sufficient cash and cash equivalents to fund our operations into the third quarter of 2017. We will require additional capital to fund our operating plan past that time. We plan to obtain additional capital through the issuance of equity or debt securities, product sales and/or licensing activities.

Our ability to raise proceeds from the sale of shares under our Common Stock Purchase Agreement is subject to limitations and conditions, including a \$1.00 minimum stock price. In addition, pursuant to the Common Stock Purchase Agreement, we agreed that we will not enter into any "variable rate" transactions with any third party from the date of the Purchase Agreement until the expiration of the twenty-four month period following the date of the Purchase Agreement, subject to certain exceptions, which could limit our ability to raise capital through certain sales of equity. In connection with our December 2016 underwritten public offering, we also agreed in the underwriting agreement not to issue shares pursuant to the Common Stock Purchase Agreement, or any other arrangement with Lincoln Park Capital Fund, LLC (Lincoln Park), for a period of six months from the date thereof without the consent of the underwriter.

We are introducing new technology into an emerging market which creates significant uncertainty about our ability to accurately project revenue, costs and cash flows. Our capital requirements will depend on many factors, including, but not limited to, the rate at which ODMs and OEMs introduce products incorporating our PicoP® scanning technology and the market acceptance and competitive position of such products. If revenues are less than we anticipate, if the mix of revenues and the associated margins varies from anticipated amounts or if expenses exceed the amounts budgeted, we may require additional capital earlier than expected to fund our operations. In addition, our operating plan provides for the development of strategic relationships with suppliers of components, products and systems, and equipment manufacturers that may require additional investments by us.

Additional capital may not be available to us or, if available, may not be available on terms acceptable to us or on a timely basis. Raising additional capital may involve issuing securities with rights and preferences that are senior to our common stock and may dilute the value of our current shareholders' shares. If adequate capital resources are not available on a timely basis, we may consider limiting our operations substantially. This limitation of operations could include reducing investments in our production capabilities or research and development projects, staff, operating costs, and capital expenditures. Reducing operations may jeopardize our ability to achieve our business goals or satisfy our customer requirements.

Qualifying a new or alternative contract manufacturer or foundry for our products could cause us to experience delays that result in lost revenues and damaged customer relationships.

We rely on single or limited-source suppliers to manufacture our products, including our MEMS die in wafer form. The lead time to establish a relationship with a new or alternative contract manufacturer(s) or foundry is a time-consuming process, as our unique technology may require significant manufacturing process adaptation to achieve full manufacturing capacity. Accordingly, we may be unable to establish a relationship with new or alternative contract manufacturers in the short-term, or at all, at prices or on other terms that are acceptable to us.

Changes in our supply chain may result in increased cost and delay and may subject us to risks and uncertainties regarding, but not limited to, product warranty, product liability and quality control standards. The loss of any single or limited-source supplier, the failure of any of these suppliers to perform as expected or the disruption in the supply chain of components from these suppliers could cause significant delays in product deliveries, which may result in lost revenues and damaged customer relationships. To the extent that we are not able to establish a relationship with a new or alternative contract manufacturer(s) or foundry in a timely manner, we may be unable to meet contract or production milestones, which could have a material adverse effect on our financial condition, results of operations and cash flows.

Our success will depend, in part, on our ability to secure significant third party manufacturing resources.

Our success will depend, in part, on our ability to provide our components and future products in commercial quantities at competitive prices and on schedule. Accordingly, we will be required to obtain access, through business partners or contract manufacturers, to manufacturing capacity and processes for the commercial production of our expected future products.

Our foreign contract manufacturers could experience severe financial difficulties or other disruptions in their business, and such continued supply could be significantly reduced or terminated. In addition, we cannot be certain that we will successfully obtain access to needed manufacturing resources concurrent with a significant increase in our planned production levels. Future manufacturing limitations of our suppliers could constrain the number of products that we are able to develop and produce.

We are dependent on third parties in order to develop, manufacture, sell and market products incorporating our PicoP® scanning technology, scanning engines, and the scanning engine components.

Our business strategy for commercializing our technology in products incorporating PicoP® scanning technology includes entering into development, manufacturing, sales and marketing arrangements with ODMs, OEMs and other third parties. These arrangements reduce our level of control over production and distribution and may subject us to risks and uncertainties regarding, but not limited to, product warranty, product liability and quality control standards.

We cannot be certain that we will be able to negotiate arrangements on acceptable terms, if at all, or that these arrangements will be successful in yielding commercially viable products. If we cannot establish these arrangements, we would require additional capital to undertake such activities on our own and would require extensive manufacturing, sales and marketing expertise that we do not currently possess and that may be difficult to obtain.

In addition, we could encounter significant delays in introducing our PicoP® scanning technology or find that the development, manufacture or sale of products incorporating our technology would not be feasible. To the extent that we enter into development, manufacturing, sales and marketing or other arrangements, our revenues will depend upon the performance of third parties. We cannot be certain that any such arrangements will be successful.

We cannot be certain that our technology platform or products incorporating our PicoP® scanning technology will achieve market acceptance. If our technology platform or products incorporating our technology do not achieve market acceptance, our revenues may not grow.

Our success will depend in part on customer acceptance of our PicoP® scanning technology. Our technology may not be accepted by manufacturers who use display and 3D sensing technologies in their products, by systems integrators, ODMs, and OEMs who incorporate the scanning engine components into their products or by end users of these products. To be accepted, our PicoP® scanning technology must meet the expectations of our current and potential customers in the consumer electronics, automotive, and other markets. If our technology platform or products incorporating our PicoP® scanning technology do not achieve market acceptance, we may not be able to continue to develop our technology.

Future products incorporating our PicoP® scanning technology and scanning engines are dependent on advances in technology by other companies.

Our PicoP® scanning technology will continue to rely on technologies, such as laser diode light sources and other components that are developed and produced by other companies. The commercial success of certain future products incorporating our PicoP® scanning technology will depend, in part, on advances in these and other technologies by other companies. We may, from time to time, contract with and support companies developing key technologies in order to accelerate the development of them for our or our customers' specific uses. There are no guarantees that such activities will result in useful technologies or products that will be profitable.

We are dependent on a small number of customers for our revenue. Our quarterly performance may vary substantially and this variance, as well as general market conditions, may cause our stock price to fluctuate greatly and potentially expose us to litigation.

In 2016, one commercial customer accounted for \$13.5 million in revenue, representing 91% of our total revenue. In 2015, the same commercial customer accounted for \$9.0 million in revenue, representing 98% of our total revenue. In 2014, the same single commercial customer accounted for \$2.0 million in revenue, representing 58% of our total revenue. A second commercial customer in 2014 accounted for \$577,000 in revenue, representing 17% of our total revenue. Our customers take time to obtain, and the loss of a significant customer could negatively affect our revenue. Our quarterly operating results may vary significantly based upon:

- Market acceptance of products incorporating our PicoP® scanning technology;
- Changes in evaluations and recommendations by any securities analysts following our stock or our industry generally;
- Announcements by other companies in our industry;
- Changes in business or regulatory conditions;
- Announcements or implementation by our competitors of technological innovations or new products;
- The status of particular development programs and the timing of performance under specific development agreements;
- Economic and stock market conditions; or
- Other factors unrelated to our company or industry.

In one or more future quarters, our results of operations may fall below the expectations of securities analysts and investors and the trading price of our common stock may decline as a consequence. In addition, following periods of volatility in the market price of a company's securities, shareholders often have instituted securities class action litigation against that company.

If we become involved in a class action suit, it could divert the attention of management and, if adversely determined, could require us to pay substantial damages.

We or our customers may fail to perform under open orders or agreements, which could adversely affect our operating results and cash flows.

Our backlog of open orders totaled \$942,000 as of December 31, 2016. We or our customers may be unable to meet the performance requirements and obligations under open orders or agreements, including performance specifications or delivery dates, required by such purchase orders or agreements. Furthermore, our customers may be unable or unwilling to perform their obligations thereunder on a timely basis, or at all if, among other reasons, our products and technologies do not achieve market acceptance, our customers' products and technologies do not achieve market acceptance or our customers otherwise fail to achieve their operating goals. To the extent we are unable to perform under such purchase orders or agreements or to the extent customers are unable or unwilling to perform, our operating results and cash flows could be adversely affected.

It may become more difficult to sell our stock in the public market or maintain our listing on the NASDAQ Global Market.

Our common stock is listed on The NASDAQ Global Market. To maintain our listing on this market, we must meet NASDAQ's listing maintenance standards. If we are unable to continue to meet NASDAQ's listing maintenance standards for any reason, our common stock could be delisted from The NASDAQ Global Market. If our common stock were delisted, we likely would seek to list our common stock on The NASDAQ Capital Market, the American Stock Exchange or on a regional stock exchange. Listing on such other market or exchange could reduce the liquidity of our common stock. If our common stock were not listed on The NASDAQ Capital Market or an exchange, trading of our common stock would be conducted in the Over-the-Counter (OTC) market on an electronic bulletin board established for unlisted securities or directly through market makers in our common stock. If our common stock were to trade in the OTC market, an investor would find it more difficult to dispose of, or to obtain accurate quotations for the price of, the common stock.

A delisting from The NASDAQ Global Market and failure to obtain listing on another market or exchange would subject our common stock to so-called penny stock rules that impose additional sales practice and market-making requirements on broker-dealers who sell or make a market in such securities. Consequently, removal from The NASDAQ Global Market and failure to obtain listing on another market or exchange could affect the ability or willingness of broker-dealers to sell or make a market in our common stock and the ability of purchasers of our common stock to sell their securities in the secondary market.

On February 27, 2017, the closing price of our common stock was \$1.71 per share.

Our lack of financial and technical resources relative to our competitors may limit our revenues, potential profits, overall market share or value.

Our products and potential products incorporating our PicoP® scanning technology will compete with established manufacturers of existing products and companies developing new technologies. Many of our competitors have substantially greater financial, technical and other resources than we have. Because of their greater resources, our competitors may develop products or technologies that may be superior to our own. The introduction of superior competing products or technologies could result in reduced revenues, lower margins or loss of market share, any of which could reduce the value of our business.

We may not be able to keep up with rapid technological change and our financial results may suffer.

The information display and 3D sensing industries have been characterized by rapidly changing technology, accelerated product obsolescence and continuously evolving industry standards. Our success will depend upon our ability to further develop our PicoP® scanning technology platform and to cost effectively introduce new products and features in a timely manner to meet evolving customer requirements and compete with competitors' product advances. We may not succeed in these efforts due to:

- Delays in product development;
- Lack of market acceptance for our technology or products incorporating our PicoP® scanning technology; or
- Lack of funds to invest in product research, development and marketing.

The occurrence of any of the above factors could result in decreased revenues, market share and value of our business.

We could face lawsuits related to our use of PicoP® scanning technology or other technologies. Defending these suits would be costly and time-consuming. An adverse outcome, in any such matter, could limit our ability to commercialize our technology or products incorporating our PicoP® scanning technology, reduce our revenues and increase our operating expenses.

We are aware of several patents held by third parties that relate to certain aspects of light scanning displays and 3D sensing products. These patents could be used as a basis to challenge the validity, limit the scope or limit our ability to obtain additional or broader patent rights of our patents or patents we have licensed. A successful challenge to the validity of our patents or patents we have licensed could limit our ability to commercialize our technology or products incorporating our PicoP® scanning technology and, consequently, materially reduce our revenues. Moreover, we cannot be certain that patent holders or other third parties will not claim infringement by us with respect to current and future technology. Because U.S. patent applications are held and examined in secrecy, it is also possible that presently pending U.S. applications will eventually be issued with claims that will be infringed by our products or our technology.

The defense and prosecution of a patent suit would be costly and time-consuming, even if the outcome were ultimately favorable to us. An adverse outcome in the defense of a patent suit could subject us to significant costs, require others and us to cease selling products incorporating our technology, require us to cease licensing our technology or require disputed rights to be licensed from third parties. Such licenses, if available, would increase our operating expenses. Moreover, if claims of infringement are asserted against our future co-development partners or customers, those partners or customers may seek indemnification from us for any damages or expenses they incur.

If we fail to manage expansion effectively, our revenue and expenses could be adversely affected.

Our ability to successfully offer products incorporating PicoP® scanning technology and implement our business plan in a rapidly evolving market requires an effective planning and management process. The growth in business and relationships with customers and other third parties has placed, and will continue to place, a significant strain on our management systems and resources. We will need to continue to improve our financial and managerial controls, reporting systems and procedures, and will need to continue to train and manage our work force.

If we fail to adequately reduce and control our manufacturing, supply chain and operating costs, our business, financial condition, and operating results could be adversely affected.

We incur significant costs related to procuring components and increasing our production capabilities to manufacture our products. We may experience delays, cost overruns or other unexpected costs associated with an increase in production. If we are unsuccessful in our efforts to reduce and control our manufacturing, supply chain and operating costs and keep costs aligned with the levels of revenues we generate, our business and financial condition could suffer.

Our technology and products incorporating our PicoP® scanning technology may be subject to future environmental, health and safety regulations that could increase our development and production costs.

Our technology and products incorporating our PicoP® scanning technology could become subject to future environmental, health and safety regulations or amendments that could negatively impact our ability to commercialize our technology and products incorporating our PicoP® scanning technology. Compliance with any such new regulations would likely increase the cost to develop and produce products incorporating our PicoP® scanning technology, and violations may result in fines, penalties or suspension of production. If we become subject to any environmental, health, or safety laws or regulations that require us to cease or significantly change our operations to comply, our business, financial condition and operating results could be adversely affected.

Our operating results may be adversely impacted by worldwide political and economic uncertainties and specific conditions in the markets we address.

In the recent past, general worldwide economic conditions have experienced a downturn due to slower economic activity, concerns about inflation, increased energy costs, decreased consumer confidence, reduced corporate profits and capital spending, and adverse business conditions. Any continuation or worsening of the current global economic and financial conditions could materially adversely affect: (i) our ability to raise, or the cost of, needed capital, (ii) demand for our current and future products, and (iii) our ability to commercialize products. We cannot predict the timing, strength, or duration of any economic slowdown or subsequent economic recovery, worldwide, regionally or in the display industry.

Because we plan to continue using foreign contract manufacturers, our operating results could be harmed by economic, political, regulatory and other factors in foreign countries.

We currently use foreign contract manufacturers and plan to continue to use foreign contract manufacturers to manufacture current and future products, where appropriate. These international operations are subject to inherent risks, which may adversely affect us, including, but not limited to:

- Political and economic instability;
- High levels of inflation, historically the case in a number of countries in Asia;
- Burdens and costs of compliance with a variety of foreign laws, regulations and sanctions;
- Foreign taxes and duties;
- Changes in tariff rates or other trade, tax or monetary policies; and
- Changes or volatility in currency exchange rates and interest rates.

Our contract manufacturers' facilities could be damaged or disrupted by a natural disaster or labor strike, either of which would materially affect our financial position, results of operations and cash flows.

A major catastrophe, such as an earthquake, monsoon, flood or other natural disaster, labor strike, or work stoppage at our contract manufacturers' facilities, our suppliers, or our customers, could result in a prolonged interruption of our business. A disruption resulting from any one of these events could cause significant delays in product shipments and the loss of sales and customers, which could have a material adverse effect on our financial condition, results of operations, and cash flows.

If our licensors and we are unable to obtain effective intellectual property protection for our products, processes and technology, we may be unable to compete with other companies.

Intellectual property protection for our products, processes and technology is important and uncertain. If we do not obtain effective intellectual property protection for our products, processes and technology, we may be subject to increased competition. Our commercial success will depend, in part, on our ability and the ability of our licensors, to maintain the proprietary nature of our PicoP® scanning technology and other key technologies by securing valid and enforceable patents and effectively maintaining unpatented technology as trade secrets.

We protect our proprietary PicoP® scanning technology by seeking to obtain United States and foreign patents in our name, or licenses to third party patents, related to proprietary technology, inventions, and improvements that may be important to the development of our business. However, our patent position and the patent position of our licensors involve complex legal and factual questions. The standards that the United States Patent and Trademark Office and its foreign counterparts use to grant patents are not always applied predictably or uniformly and can change.

Additionally, the scope of patents are subject to interpretation by courts and their validity can be subject to challenges and defenses, including challenges and defenses based on the existence of prior art. Consequently, we cannot be certain as to the extent to which we will be able to obtain patents for our new products and technology or the extent to which the patents that we already own or license from others, protect our products and technology. Reduction in scope of protection or invalidation of our licensed or owned patents, or our inability to obtain new patents, may enable other companies to develop products that compete directly with ours on the basis of the same or similar technology.

We also rely on the law of trade secrets to protect unpatented know-how and technology to maintain our competitive position. We try to protect this know-how and technology by limiting access to the trade secrets to those of our employees, contractors and partners, with a need-to-know such information and by entering into confidentiality agreements with parties that have access to it, such as our employees, consultants and business partners. Any of these parties could breach the agreements and disclose our trade secrets or confidential information, or our competitors might learn of the information in some other way. If any trade secret not protected by a patent were to be disclosed to or independently developed by a competitor, our competitive position could be negatively affected.

We could be subject to significant product liability claims that could be time-consuming and costly, divert management attention and adversely affect our ability to obtain and maintain insurance coverage.

We could be subject to product liability claims if any of the product applications are alleged to be defective or cause harmful effects. For example, because some of the scanning engines incorporating our PicoP® scanning technology could scan a low power beam of colored light into the user's eye, the testing, manufacture, marketing and sale of these products involve an inherent risk that product liability claims will be asserted against us.

Additionally, any misuse of our technology or products incorporating our PicoP® scanning technology by end users or third parties that obtain access to our technology, could result in negative publicity and could harm our brand and reputation. Product liability claims or other claims related to our products or our technology, regardless of their outcome, could require us to spend significant time and money in litigation, divert management time and attention, require us to pay significant damages, harm our reputation or hinder acceptance of our products. Any successful product liability claim may prevent us from obtaining adequate product liability insurance in the future on commercially desirable or reasonable terms. An inability to obtain sufficient insurance coverage at an acceptable cost or otherwise to protect against potential product liability claims could prevent or inhibit the commercialization of our products and our PicoP® scanning technology.

Our contracts and collaborative research and development agreements have long sales cycles, which makes it difficult to plan our expenses and forecast our revenues.

Our contracts and collaborative research and development agreements have long sales cycles that involve numerous steps including determining the product application, exploring the technical feasibility of a proposed product, evaluating the costs of manufacturing a product or qualifying a new or alternative contract manufacturer for production. Our long sales cycle, which can last several years, makes it difficult to predict the quarter in which revenue recognition will occur. Delays in entering into contracts and collaborative research and development agreements could cause significant variability in our revenues and operating results for any particular period.

Our contracts and collaborative research and development agreements may not lead to any product or any products that will be profitable.

Our contracts and collaborative research and development agreements, including without limitation, those discussed in this document, are exploratory in nature and are intended to develop new types of products for new applications. Our efforts may prove unsuccessful and these relationships may not result in the development of any product or any products that will be profitable.

Our operations could be adversely impacted by information technology system failures, network disruptions, or cyber security breaches.

We rely on information technology systems to process, transmit, store, and protect electronic data between our employees, our customers and our suppliers. Our systems are vulnerable to damage or interruptions due to events beyond our control, including, but are not limited to, natural disasters, power loss, telecommunications failures, computer viruses, hacking, or other cyber security issues. Our system redundancy may be inadequate and our disaster recovery planning may be ineffective or insufficient to account for all eventualities. Additionally, we maintain insurance coverage to address certain aspects of cyber risks. Such insurance coverage may be insufficient to cover all losses or all claims that may arise, should such an event occur.

Loss of any of our key personnel could have a negative effect on the operation of our business.

Our success depends on our executive officers and other key personnel and on the ability to attract and retain qualified new personnel. Achievement of our business objectives will require substantial additional expertise in the areas of sales and marketing, research and product development and manufacturing. Competition for qualified personnel in these fields is intense, and the inability to attract and retain additional highly skilled personnel, or the loss of key personnel, could hinder our ability to compete effectively in the information display and 3D sensing markets and adversely affect our business strategy execution and results of operations.

ITEM 1B. UNRESOLVED STAFF COMMENTS

None.

ITEM 2. PROPERTIES

We currently lease approximately 23,900 square feet of combined use office, laboratory and manufacturing space at our corporate headquarters in Redmond, Washington. The 65 month lease expires in January 2019.

ITEM 3. LEGAL PROCEEDINGS

On March 31, 2014, Asia Optical Co., Inc., a supplier pursuant to an agreement entered into in 2008, filed a complaint for arbitration with the American Arbitration Association claiming that we ordered products from them and failed to take delivery of and pay for such products. The relief sought in the complaint is \$3.6 million plus attorneys' fees, interest and arbitration costs. We contest the claim and are defending against it. An adverse outcome of these proceedings could materially and adversely affect our financial condition. At this stage, we cannot predict the likelihood of an unfavorable outcome or the range of potential loss.

We are also subject to various claims and pending or threatened lawsuits in the normal course of business. We are not currently party to any other legal proceedings that we believe are reasonably possible to have a material adverse effect on our financial position, results of operations or cash flows.

ITEM 4. MINE SAFETY DISCLOSURES

Not applicable.

ITEM 4A. EXECUTIVE OFFICERS OF THE REGISTRANT

Executive officers are appointed by our Board of Directors and hold office until their successors are elected and duly qualified. The following persons serve as executive officers of MicroVision, Inc.:

Alexander Y. Tokman, age 55, has served as President, Chief Executive Officer and Director of MicroVision since January 2006. Mr. Tokman served as MicroVision's President and Chief Operating Officer from July 2005 to January 2006. Mr. Tokman joined MicroVision after a ten-year tenure at GE Healthcare, a subsidiary of General Electric, where he led several global businesses, most recently as General Manager of its Global Molecular Imaging and Radiopharmacy multi-technology business unit from 2003 to 2005. Prior to that, between 1995 and 2003, Mr. Tokman served in various cross-functional and cross-business leadership roles at GE where he led the definition and commercialization of several medical modalities product segments including PET/CT, which added over \$500 million of revenue growth to the company within the first three years of its commercial introduction. Mr. Tokman is a certified Six Sigma and Design for Six Sigma (DFSS) Black Belt and Master Black Belt and as one of GE's Six Sigma pioneers, he drove the quality culture change across GE Healthcare in the late 1990s. From November 1989 to March 1995, Mr. Tokman served as new technologies programs lead and the head of the I&RD office at Tracor Applied Sciences, a subsidiary of then Tracor, Inc. Mr. Tokman holds a B.S. and an M.S. in electrical engineering from the University of Massachusetts, Dartmouth.

Stephen P. Holt, age 54, joined MicroVision in April 2013 as Chief Financial Officer. Prior to MicroVision, from May 2007 to May 2012, he served as Chief Financial Officer of PixelOptics, where he played a lead role in bringing the company's first electronic focusing eyewear product to market. At this venture capital-backed start-up, Mr. Holt raised capital and negotiated strategic partner agreements to license technology in addition to implementing policies and procedures to create an infrastructure capable of supporting rapid growth while maintaining a strong internal control environment. From March 2006 to April 2007, he was the Chief Financial Officer of Interstate Distributors, a trucking and transportation services company.

From December 2003 to March 2006, he was the Chief Financial Officer of a group of companies consisting of Activelight, Boxlight, Cinelight and Projector Wholesale Supply. These companies were value-added resellers and distributors of audio-visual and projection equipment. Mr. Holt, a Certified Management Accountant, holds a B.S. from California State University, Chico and an M.B.A. from Santa Clara University.

David J. Westgor, age 63, was appointed Vice President, General Counsel and Secretary in November 2013, after serving as General Counsel since December 2012 and Deputy General Counsel since June 2007. In his current role, Mr. Westgor oversees the legal department, advises the Board of Directors and executive team on corporate governance matters, and provides support for the company's business activities. Before joining MicroVision, Mr. Westgor was Senior Counsel at Medtronic Physio-Control, where he had primary responsibility for the legal affairs of its medical and informatics business units. Mr. Westgor graduated from Loyola Law School and practiced in the Los Angeles office of Pillsbury Winthrop. He moved to the Seattle area to become in-house counsel at Advanced Radio Telecom, a broadband telecommunications company. Mr. Westgor holds a B.A. from St. Olaf College and an M.F.A. degree from the Art Institute of Chicago.

Dale E. Zimmerman, age 57, has served as Vice President of Research and Development since June 2012 and as Director of Systems Engineering from June 2011 to May 2012. Prior to MicroVision, from February 2006 to December 2008, he served as Vice President of Product Strategy of Silicon Image, a company specializing in high speed serial interface solutions for HDTV, PC and storage products. From 1996 to 2006, he served as General Manager of DLP TV for Texas Instruments, where he played an important role in launching the first conference room projectors, home theater projectors, and HDTVs. His teams have received many awards, including three Emmys and CES Innovation Best of Show. He holds both a B.S. and an M.S. degree in electrical and electronics engineering from Massachusetts Institute of Technology (MIT) and a second M.S. in electrical engineering from Stanford University.

PART II.

ITEM 5. MARKET FOR REGISTRANT'S COMMON EQUITY, RELATED STOCKHOLDER MATTERS AND ISSUER PURCHASES OF EQUITY SECURITIES

Our common stock began trading publicly on August 27, 1996. Our common stock trades on The NASDAQ Global Market under the ticker symbol "MVIS." We have never declared or paid cash dividends on our common stock. We currently anticipate that we will retain all future earnings to fund the operations of our business and do not anticipate paying dividends on the common stock in the foreseeable future.

As of February 27, 2017, there were approximately 112 holders of record of 68,122,000 shares of common stock outstanding. As many of our shares of common stock are held by brokerages and institutions on behalf of shareholders, we are unable to estimate the total number of beneficial holders of our common stock represented by these record holders.

Quarter Ended	Common Stock	
	HIGH	LOW
<u>2015</u>		
March 31, 2015	\$ 4.23	\$ 1.72
June 30, 2015	3.88	2.86
September 30, 2015	3.54	2.56
December 31, 2015	3.47	2.20
<u>2016</u>		
March 31, 2016	\$ 3.08	\$ 1.65
June 30, 2016	2.21	1.64
September 30, 2016	2.07	1.30
December 31, 2016	1.85	0.89
January 1, 2017 to February 27, 2017	\$ 1.94	\$ 1.15

ITEM 6. SELECTED FINANCIAL DATA

A summary of selected financial data as of and for the five years ended December 31, 2016 is set forth below. It should be read in conjunction with our consolidated financial statements and related notes appearing elsewhere in this Annual Report on Form 10-K.

(In thousands, except per share data)

	Year Ended December 31,				
	2016	2015	2014	2013	2012
Statement of Operations Data					
Revenue	\$ 14,761	\$ 9,188	\$ 3,485	\$ 5,852	\$ 8,365
Net loss available for common shareholders	(16,472)	(14,542)	(18,120)	(13,178)	(22,693)
Basic and diluted net loss per share	(0.32)	(0.31)	(0.44)	(0.47)	(1.05)
Weighted-average shares outstanding basic and diluted	51,958	46,540	41,599	28,025	21,595
Balance Sheet Data					
Cash and cash equivalents	\$ 15,139	\$ 7,888	\$ 8,349	\$ 5,375	\$ 6,850
Working capital (deficit)	10,104	3,371	5,040	(3,878)	1,831
Total assets	20,106	14,042	11,945	8,447	12,938
Long-term liabilities	5,388	6,491	488	481	20
Total shareholders' equity (deficit)	7,474	(153)	6,872	(1,696)	5,054

ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Overview

Our business strategy is to commercialize our PicoP® scanning technology by enabling ODMs and OEMs to produce end-user products via three go-to-market paths:

1. Design and sell LBS engines directly to ODMs and OEMs to incorporate inside their products;
2. License our LBS technology and sell key components to ODMs and OEMs to create their own scanning engines; and
3. License LBS technology to ODMs and OEMs who developed their own key components.

In 2014, our revenue was primarily derived from engineering services from collaborative research and development and contract agreements. In 2015 and 2016, our revenue was primarily generated from product sales and royalty revenue, and engineering services has become a smaller part of our business. We expect product sales to be a significant portion of our total revenue in the future.

In 2016, 87% of our revenue was generated from product sales, less than 1% was generated from performance on contracts for prototype units, 7% was generated from a prorated portion of the \$8.0 million upfront payment, and 5% was generated from ongoing per unit royalties. Sony Corporation (Sony) accounted for 91% of our total revenue in 2016.

In 2015, 70% of our revenue was generated from product sales, 17% was generated from performance on support services contracts, 10% was generated from a prorated portion of the \$8.0 million upfront payment, and 3% was generated from ongoing per unit royalties. Sony accounted for 98% of our total revenue in 2015.

In 2014, 49% of our revenue was generated from performance on collaborative research and development agreements, 40% was generated from performance on contracts to deliver customized prototype units, 10% was generated from product sales, and 1% was generated from ongoing per unit royalties. Sony accounted for 58% of our total revenue and a worldwide logistics company accounted for 17% of our total revenue in 2014.

We have incurred substantial losses since inception and expect to incur a significant loss during the fiscal year ending December 31, 2017. We have funded operations to date primarily through the sale of common stock, convertible preferred stock, warrants, the issuance of convertible debt and, to a lesser extent, from development contract revenues, product sales and licensing activities. There can be no assurance that additional capital will be available or that, if available, it will be available on terms acceptable to us on a timely basis. We cannot be certain that we will succeed in commercializing our technology or products. These factors raise substantial doubt regarding our ability to continue as a going concern.

These financial statements were prepared assuming we will continue as a going concern and do not include any adjustments that might be necessary should we be unable to continue as a going concern.

Key accounting policies and estimates

Our discussion and analysis of our financial condition and results of operations are based upon our consolidated financial statements, which have been prepared in accordance with accounting principles generally accepted in the United States. The preparation of these financial statements requires us to make estimates and judgments that materially affect the reported amounts of assets, liabilities, revenues and expenses, and related disclosure of contingent liabilities. We evaluate our estimates on a continuous basis. We base our estimates on historical data, terms of existing contracts, our evaluation of trends in the information display and 3D sensing industries, information provided by our current and prospective customers and strategic partners, information available from other outside sources and on various other assumptions we believe to be reasonable under the circumstances. The results form the basis for making judgments regarding the carrying values of assets and liabilities that are not readily apparent from other sources. Actual results may differ from these estimates under different assumptions or conditions.

We believe the following key accounting policies require significant judgments and estimates used in the preparation of our consolidated financial statements.

Revenue recognition

We recognize revenue when: (i) persuasive evidence of an arrangement exists, (ii) delivery has occurred and there are no uncertainties regarding customer acceptance, (iii) fees are fixed or determinable, and (iv) collection is reasonably assured.

We generate revenue from many sources and activities. We enter into arrangements that can include various combinations of product sales, services, and licensing activities. For multiple- element arrangements, we use a hierarchy to determine the contract consideration to be used for allocating revenue to deliverables: (i) vendor-specific objective evidence of fair value (VSOE), (ii) third party evidence of selling price (TPE), and (iii) best estimate of selling price. To date, our revenue sources can be classified as: product revenue, royalty revenue, contract revenue, or development revenue.

Product revenue

Our product sales generally include acceptance provisions. We recognize product revenue upon acceptance of the product by the customer or expiration of the contractual acceptance period, after which there are no rights of return. No estimates are made for product returns because revenue is recognized upon expiration of the contractual acceptance period.

Royalty revenue

We recognize revenue on upfront license fees over the expected time frame that we provide services or have ongoing obligations under the agreement. Ongoing per unit royalties are recognized when reported by our customer to us on a quarterly basis. Currently, we recognize revenue for ongoing per unit royalties one quarter in arrears when reported by our customer, representing when such amounts are fixed and determinable, and all other revenue recognition criteria are met.

Contract revenue

Our contract revenue in a particular period is dependent upon when we enter into a contract, the value of the contracts we have entered into, and the availability of technical resources to perform work on the contracts.

We recognize contract revenue related to the sale of prototype units and evaluation kits upon acceptance of the deliverables by the customer or expiration of the contractual acceptance period, after which there are no rights of return.

We recognize contract revenue on long-term, cost plus fixed fee, and fixed price contracts using the percentage-of-completion method. Under the percentage-of-completion method, revenue is recognized as work progresses on the contract. The percentage-of-completion method relies on estimates of total expected contract revenue and costs. At the end of each period, we estimate the labor, material and other costs required to complete the contract using data provided by our technical team, project managers, vendors, outside consultants and others and compare these to costs incurred to date.

Recognized revenues are subject to amendments for actual costs incurred. Amendments to revenue and costs to complete estimates are recognized in the period in which the facts become known. In the future, amendments to estimates could significantly impact recognized revenue in any one reporting period. If we are unable to estimate costs on a contract, revenue is recognized using the completed-contract method. Under the completed-contract method, revenue and contract costs are deferred and both are recognized when all deliverables are completed.

Development revenue

We evaluate the performance criteria and terms of our collaborative research and development agreements to determine whether revenue should be recognized under a performance-based method or milestone method. Significant items covered in our evaluation include the following:

- The nature of our obligation under the agreement;
- Whether provisions leading to variable revenues exist;
- Whether any payments are refundable;
- Whether the deliverables should be treated as a single unit of accounting or separated into multiple units;
- Whether substantive milestones exist;
- Whether milestone payments are commensurate with either our level of effort or the increase in value of the customer's rights; and
- Whether a licensing agreement exists.

At the end of each period, we evaluate total estimated costs for each agreement. Amendments to the estimated costs are recognized in the period in which the facts become known. Any related costs for work performed under collaborative research and development agreements are expensed in the periods incurred and included in the Statement of Operations in research and development expense.

License agreements

In March 2015, we signed a license agreement as part of a multiple-element arrangement with Sony for our PicoP® scanning technology. The license agreement granted Sony a non-exclusive license to manufacture and sell scanning engines that use our PicoP® scanning technology.

For multiple-element arrangements, we use a hierarchy to determine the contract consideration to be used for allocating revenue to deliverables: (i) vendor-specific objective evidence of fair value (VSOE), (ii) third party evidence of selling price (TPE) and (iii) best estimate of selling price. Because VSOE and TPE do not exist for the March 2015 agreement, we have allocated the contract consideration based on our best estimate.

Under the terms of this multiple-element arrangement, we received an \$8.0 million upfront payment in March 2015 and we will receive a per unit royalty for each display module sold by Sony containing our PicoP® scanning technology. We recognize revenue on the initial \$8.0 million payment on a straight-line basis within royalty revenues on the statement of operations, over a period of eight years which is the expected time frame that we will provide services under the agreement. Ongoing per unit royalties are reported by Sony to us on a quarterly basis. Currently, we recognize revenue for ongoing per unit royalties one quarter in arrears when reported by Sony, representing when such amounts are fixed and determinable, and all other revenue recognition criteria are met. Products delivered under multiple-element arrangements will be recognized upon acceptance of the deliverables by the customer or the expiration of the contractual acceptance period, after which there are no rights of return.

Intangible assets

Our intangible assets consist exclusively of purchased patents. The patents are amortized using the straight-line method over their estimated period of benefit, ranging from one to seventeen years. We evaluate the recoverability of intangible assets periodically by taking into account events or circumstances that may warrant revised estimates of useful lives or that indicate the asset may be impaired. We compare the projected undiscounted net cash flows associated with the related intangible assets or group of assets over their remaining lives against their respective carrying amounts. Measurement of an impairment loss for our intangible assets is based on the difference between the fair value of the asset and its carrying value.

Inventory valuation

Inventory is computed using the first-in, first-out (FIFO) method and is stated at the lower of cost and net realizable value. We make judgments and estimates to value our inventory and make adjustments to its carrying value. We review several factors in determining the market value of our inventory including: evaluating the replacement cost of the raw materials, the net realizable value of the finished goods, and the likelihood of obsolescence. If we do not achieve our targeted sales prices, if market conditions for our components or products were to decline, or if we do not achieve our sales forecast, additional reductions in the carrying value of the inventory would be required.

Warranty

We provide a warranty on scanning engines and components incorporating our PicoP® scanning technology, and we accrue warranty reserves at the time revenue is recognized. Warranty reserves include management's best estimate of the projected costs to repair or to replace any items under warranty based upon the actual units of revenue recognized in the period. We review our reserves each period to ensure that our accruals are adequate in meeting expected future warranty obligations, and we will adjust our estimates as needed. These estimates are inherently uncertain and changes to our historical or projected experience may cause material changes to our warranty reserves in the future.

Share-based compensation

We issue share-based compensation to employees in the form of stock options and restricted stock units (RSUs). We account for the share-based awards by recognizing the fair value of share-based compensation expense on a straight-line basis over the service period of the award, net of estimated forfeitures. The fair value of stock options is estimated on the grant date using the Black-Scholes option pricing model. The fair value of RSUs is determined by the closing price of our common stock on the grant date. Changes in estimated inputs or using other option valuation methods may result in materially different option values and share-based compensation expense.

Income taxes

Significant judgment is required in evaluating our tax position and in determining our provision for income taxes, our deferred tax assets and liabilities and any valuation allowance recorded against our net deferred tax assets. We record a valuation allowance when necessary to reduce deferred tax assets to the amount expected to be realized. Based on our history of losses since inception, the available objective evidence creates sufficient uncertainty regarding the realizability of the deferred tax assets. Our actual tax exposure may differ from our estimates and any such differences may impact income or tax expense in the period in which such determination is made.

The key accounting policies described above are not intended to be a comprehensive list of all of our accounting policies. In many cases, the accounting treatment of a particular transaction is specifically dictated by generally accepted accounting principles, with no need for us to apply judgment or make estimates. There are also areas in which our judgment in selecting any available alternative would not produce a materially different result to our consolidated financial statements. Additional information about our accounting policies, and other disclosures required by generally accepted accounting principles, are set forth in the notes to our consolidated financial statements.

Inflation has not had a material impact on our revenues or income from continuing operations over the three most recent fiscal years.

YEAR ENDED DECEMBER 31, 2016 COMPARED TO YEAR ENDED DECEMBER 31, 2015.

Product revenue

	2016	% of total revenue	2015	% of total revenue	\$ change	% change
<i>(In thousands)</i>						
Product revenue	\$ 12,849	87.0	\$ 6,452	70.2	\$ 6,397	99.1

Product revenue is revenue from sales of our products, which are MEMS and ASICs. Product revenue was higher during the year ended December 31, 2016, compared to the same period in 2015, due to higher product sales to Sony as part of continued shipments of orders we received during 2015 and 2014 totaling \$14.6 million and \$3.8 million, respectively, for key components to be integrated into display modules it manufactures and sells. During 2016, we completed delivery of all outstanding orders from Sony and the backlog of product orders at December 31, 2016 was zero compared to \$11.0 million at December 31, 2015.

Royalty revenue

	2016	% of total revenue	2015	% of total revenue	\$ change	% change
<i>(In thousands)</i>						
Royalty revenue	\$ 1,803	12.2	\$ 1,165	12.7	\$ 638	54.8

Royalty revenue is revenue derived from license agreements to our PicoP® scanning technology. Royalty revenue was higher during the year ended December 31, 2016, compared to the same period in 2015, as a result of higher royalty payments we received from Sony for display modules it sold.

During the year ended December 31, 2016, we recognized \$801,000 from ongoing per unit royalties, and \$1.0 million from a prorated portion of the \$8.0 million upfront payment. During the year ended December 31, 2015, we recognized \$316,000 from ongoing per unit royalties, and \$849,000 from a prorated portion of the \$8.0 million upfront payment. At December 31, 2016, remaining unrecognized upfront license fees are included in current and long-term deferred revenues, amounting to \$999,000 and \$5.1 million, respectively. At December 31, 2015, unrecognized upfront license fees are included in current and long-term deferred revenues, amounting to \$1.0 million and \$6.1 million, respectively.

Contract revenue

	2016	% of total revenue	2015	% of total revenue	\$ change	% change
<i>(In thousands)</i>						
Contract revenue	\$ 109	0.8	\$ 1,571	17.1	\$ (1,462)	(93.1)

Contract revenue includes revenue from support service contracts and the sale of prototype units and evaluation kits based on our PicoP® scanning engine. In June 2015, we recognized the full contract value of \$1.5 million in revenue having completed all deliverables and obligations under an agreement to provide support services to Sony for the production readiness, initial production and market launch for display modules incorporating our PicoP® scanning technology.

The contract backlog, including orders for prototype units and evaluation kits, at December 31, 2016 was \$942,000 compared to \$45,000 at December 31, 2015, and is scheduled for completion during the next twelve months.

Cost of product revenue

	2016	% of product revenue	2015	% of product revenue	\$ change	% change
<i>(In thousands)</i>						
Cost of product revenue	\$ 10,320	80.3	\$ 6,384	98.9	\$ 3,936	61.7

Cost of product revenue includes the direct and allocated indirect costs of products sold to customers. Cost of product revenue can fluctuate significantly from period to period, depending on the volume and product mix and the level of manufacturing overhead expense. Cost of product revenue as a percentage of net product revenue decreased during the year ended December 31, 2016, compared to 2015, driven primarily by a significant increase in product deliveries to Sony.

During the year ended December 31, 2016, we expensed approximately \$1.1 million of manufacturing overhead associated with production capacity in excess of production requirements, compared to \$873,000 in 2015. Additionally, during the year ended December 31, 2016, we recorded a provision for scrap of \$187,000 compared to \$287,000 in 2015.

Cost of contract revenue

	<u>2016</u>	<u>% of contract revenue</u>	<u>2015</u>	<u>% of contract revenue</u>	<u>\$ change</u>	<u>% change</u>
<i>(In thousands)</i>						
Cost of contract revenue	\$ 54	49.5	\$ 796	50.7	\$ (742)	(93.2)

Cost of contract revenue includes both the direct and allocated indirect costs of performing on contracts and producing prototype units and evaluation kits based on our PicoP® scanning engines. The decrease in cost of contract revenue for the year ended December 31, 2016, compared to 2015, was primarily attributed to reduced contract activity compared to the prior year.

Research and development expense

	<u>2016</u>	<u>2015</u>	<u>\$ change</u>	<u>% change</u>
<i>(In thousands)</i>				
Research and development expense	\$ 12,134	\$ 8,680	\$ 3,454	39.8

Research and development expense consists of compensation related costs of employees and contractors engaged in internal research and product development activities, direct material to support development programs, laboratory operations, outsourced development and processing work, and other operating expenses. We assign our research and development resources based on the business opportunity of the available projects, the skill mix of the resources available and the contractual commitments we have made to our customers.

The increase in research and development expense during the year ended December 31, 2016, compared to 2015, was attributable to the allocation of resources to internal research and development activities that were previously designated to a commercial contract in prior periods in addition to higher costs related to subcontractors and increased personnel-related compensation and benefits expenses.

We believe that a substantial level of continuing research and development expense will be required to further develop our PicoP® scanning technology.

Sales, marketing, general and administrative expense

	<u>2016</u>	<u>2015</u>	<u>\$ change</u>	<u>% change</u>
<i>(In thousands)</i>				
Sales, marketing, general and administrative expense	\$ 8,743	\$ 7,879	\$ 864	11.0

Sales, marketing, general and administrative expense includes compensation and support costs for marketing, sales, management and administrative staff, and for other general and administrative costs, including legal and accounting services, consultants and other operating expenses.

The increase in sales, marketing, general and administrative expense during the year ended December 31, 2016, compared to 2015 was primarily due to increased personnel-related compensation and benefits expenses, professional fees and business development costs.

Gain on sale of previously reserved inventory

	<u>2016</u>	<u>2015</u>	<u>\$ change</u>	<u>% change</u>
<i>(In thousands)</i>				
Gain on sale of previously reserved inventory	\$ (32)	\$ (1)	\$ (31)	3,100.0

Gain on sale of previously reserved inventory includes the sales of excess component inventory for discontinued products that was fully reserved in prior periods. The activity during the years ended December 31, 2016 and 2015 was primarily the sale of previously reserved excess component inventory.

YEAR ENDED DECEMBER 31, 2015 COMPARED TO YEAR ENDED DECEMBER 31, 2014.

Product revenue

	<u>2015</u>	<u>% of total revenue</u>	<u>2014</u>	<u>% of total revenue</u>	<u>\$ change</u>	<u>% change</u>
<i>(In thousands)</i>						
Product revenue	\$ 6,452	70.2	\$ 352	10.1	\$ 6,100	1,733.0

Product revenue was higher during the year ended December 31, 2015, than the same period in 2014, due to higher product sales to Sony as part of continued shipments of orders we received during 2015 and 2014 totaling \$14.6 million and \$3.8 million, respectively, for key components to be integrated into display modules it manufactures and sells. The backlog of product orders at December 31, 2015 was \$11.0 million compared to \$3.6 million at December 31, 2014. All backlog at December 31, 2015 was fulfilled during 2016.

Royalty revenue

	<u>2015</u>	<u>% of total revenue</u>	<u>2014</u>	<u>% of total revenue</u>	<u>\$ change</u>	<u>% change</u>
<i>(In thousands)</i>						
Royalty revenue	\$ 1,165	12.7	\$ 40	1.1	\$ 1,125	2,812.5

Royalty revenue was higher during the year ended December 31, 2015, compared to the same period in 2014, as a result of the prorated revenue that was recognized from the \$8.0 million upfront license fee we received from Sony in March 2015 and ongoing per unit royalties on display modules it sells.

During the year ended December 31, 2015, we recognized \$316,000 from ongoing per unit royalties, and \$849,000 from a prorated portion of the \$8.0 million upfront payment. During the year ended December 31, 2014, we recognized \$40,000 from ongoing per unit royalties.

Contract revenue

	<u>2015</u>	<u>% of total revenue</u>	<u>2014</u>	<u>% of total revenue</u>	<u>\$ change</u>	<u>% change</u>
<i>(In thousands)</i>						
Contract revenue	\$ 1,571	17.1	\$ 1,402	40.2	\$ 169	12.1

During the year ended December 31, 2015, we recognized the full contract value of \$1.5 million in revenue, having completed all deliverables and obligations under the agreement. During the year ended December 31, 2014, our contract revenue included the delivery of prototype units to customers in the automotive and consumer electronics industries, as well as the delivery of customized scanning engines to a worldwide logistics company during the third quarter of that year.

The contract backlog, including orders for prototype units and evaluation kits, at December 31, 2015 was \$45,000 compared to \$1.5 million at December 31, 2014.

Development revenue

	<u>2015</u>	<u>% of total revenue</u>	<u>2014</u>	<u>% of total revenue</u>	<u>\$ change</u>	<u>% change</u>
<i>(In thousands)</i>						
Development revenue	\$ -	-	\$ 1,691	48.5	\$ (1,691)	(100.0)

In March 2013, we entered into a \$4.6 million collaborative research and development agreement with Sony to incorporate our PicoP® scanning technology into a display module that could enable a variety of new products. As of September 30, 2014, we had completed all deliverables and obligations under the collaborative research and development agreement and had recognized the full contract value of \$4.6 million. Based on the terms of this agreement, we recognized development revenue as work progressed on the agreement and as our customer accepted the deliverables using a proportional method based on the lesser of the cumulative proportion of total estimated costs to be incurred under the agreement versus the cash payments received plus outstanding billings for work accepted by the customer.

Cost of product revenue

	<u>2015</u>	<u>% of product revenue</u>	<u>2014</u>	<u>% of product revenue</u>	<u>\$ change</u>	<u>% change</u>
<i>(In thousands)</i>						
Cost of product revenue	\$ 6,384	98.9	\$ 228	64.8	\$ 6,156	2,700.0

Cost of product revenue was higher during the year ended December 31, 2015, than the same period in 2014, as a result of higher volume of product sales to Sony.

Cost of contract revenue

	<u>2015</u>	<u>% of contract revenue</u>	<u>2014</u>	<u>% of contract revenue</u>	<u>\$ change</u>	<u>% change</u>
<i>(In thousands)</i>						
Cost of contract revenue	\$ 796	50.7	\$ 816	58.2	\$ (20)	(2.5)

The decrease in cost of contract revenue during the year ended December 31, 2015 was primarily attributed to reduced contract activity compared to the prior year.

Research and development expense

	<u>2015</u>	<u>2014</u>	<u>\$ change</u>	<u>% change</u>
<i>(In thousands)</i>				
Research and development expense	\$ 8,680	\$ 9,067	\$ (387)	(4.3)

The decrease in research and development expense during the year ended December 31, 2015, compared to 2014, was primarily attributable to the allocation of resources to a commercial contract during the period, and these costs were recognized as cost of contract revenue upon completion of all deliverables and obligations under the agreement.

Sales, marketing, general and administrative expense

	<u>2015</u>	<u>2014</u>	<u>\$ change</u>	<u>% change</u>
<i>(In thousands)</i>				
Sales, marketing, general and administrative expense	\$ 7,879	\$ 7,005	\$ 874	12.5

The increase in sales, marketing, general and administrative expense during the year ended December 31, 2015, compared to 2014, was primarily attributed to increased business development payroll costs and higher outsourced professional and contract services costs.

Gain on sale of previously reserved inventory

	<u>2015</u>	<u>2014</u>	<u>\$ change</u>	<u>% change</u>
<i>(In thousands)</i>				
Gain on sale of previously reserved inventory	\$ (1)	\$ (463)	\$ 462	(99.8)

The activity during the years ended December 31, 2015 and 2014 was primarily the sale of previously reserved excess component inventory.

Loss on warrant exchange

	<u>2015</u>	<u>2014</u>	<u>\$ change</u>	<u>% change</u>
<i>(In thousands)</i>				
Loss on warrant exchange	\$ -	\$ (4,967)	\$ 4,967	(100.0)

In February 2014, we issued 3.7 million shares of our common stock under the exchange provisions of our then-outstanding warrants. During the year ended December 31, 2014, we recorded a loss of \$5.0 million on the exchange as the fair market value of the common stock issued was greater than the obligation recorded due to an increase in our stock price from December 31, 2013 to the date the warrants were exchanged.

Income taxes

No provision for income taxes has been recorded because we have experienced net losses from inception through December 31, 2016. At December 31, 2016, we had net operating loss carryforwards of approximately \$371.6 million for federal income tax reporting purposes. In addition, we have research and development tax credits of \$7.0 million. The net operating loss carryforwards and research and development credits available to offset future taxable income, if any, will expire in varying amounts from 2018 to 2036, if not previously used.

In addition to the tax benefits above, we have \$310,000 of capital loss carryforwards that are scheduled to expire in 2017. In certain circumstances, as specified in the Internal Revenue Code, a 50% or more ownership change by certain combinations of our shareholders during any three year period would result in a limitation on our ability to use a portion of our net operating loss carryforwards.

We recognize interest accrued and penalties related to unrecognized tax benefits in tax expense. We did not have any unrecognized tax benefits at December 31, 2016 or at December 31, 2015.

Liquidity and Capital Resources

We have incurred significant losses since inception. We have funded operations to date primarily through the sale of common stock, convertible preferred stock, warrants, the issuance of convertible debt and, to a lesser extent, from development contract revenues, product sales, and licensing activities. At December 31, 2016, we had \$15.1 million in cash and cash equivalents.

Based on our current operating plan, and without additional proceeds from the sale of shares under our existing Common Stock Purchase Agreement or ATM facility discussed in Note 8, we anticipate that we have sufficient cash and cash equivalents to fund our operations into the third quarter of 2017. We will require additional capital to fund our operating plan past that time. We plan to obtain additional capital through the issuance of equity or debt securities, product sales and/or licensing activities. There can be no assurance that additional capital will be available or that, if available, it will be available on terms acceptable to us on a timely basis. If adequate capital resources are not available on a timely basis, we intend to consider limiting our operations substantially. This limitation of operations could include reducing our planned investment in development projects, staff, operating costs, capital expenditures and investments in research and development. Our ability to raise proceeds from the sale of shares under our Common Stock Purchase Agreement is subject to limitations and conditions, including a \$1.00 minimum stock price. In connection with our December 2016 underwritten public offering, we also agreed in the underwriting agreement not to issue shares pursuant to the Common Stock Purchase Agreement, or any other arrangement with Lincoln Park, for a period of six months from the date thereof without the consent of the underwriter.

These factors raise substantial doubt regarding our ability to continue as a going concern. These financial statements were prepared assuming we will continue as a going concern and do not include any adjustments that might be necessary should we be unable to continue as a going concern.

Operating activities

Cash used in operating activities totaled \$14.8 million during 2016, compared to \$5.8 million in 2015, and \$13.0 million in 2014. The change in cash flows from operating activities in 2015 primarily reflects an \$8.0 million upfront payment we received under the terms of the license agreement with Sony for our PicoP® scanning technology. Cash used in operating activities resulted primarily from cash used to fund our net loss, after adjusting for non-cash charges such as realized gains and losses on warrant exchange, share-based compensation, depreciation and amortization charges and changes in operating assets and liabilities.

Investing activities

Cash used in investing activities totaled \$891,000 in 2016, compared to \$1.1 million in 2015, and \$173,000 in 2014. Purchases of property and equipment totaled \$895,000 in 2016, compared to \$1.1 million in 2015, and \$207,000 in 2014. We received proceeds totaling \$4,000 from the sale of property and equipment during 2016. There was no activity in the sale of property and equipment during 2015, compared to sales proceeds of \$34,000 in 2014.

Financing activities

Cash provided by financing activities totaled \$23.0 million in 2016, compared to \$6.5 million in 2015, and \$16.1 million in 2014. Principal payments under capital leases and long-term debt was \$15,000 in 2016, zero in 2015, and \$15,000 in 2014.

The following is a list of our financing activities during 2016, 2015 and 2014.

- In December 2016, we raised approximately \$2.1 million before issuance costs of approximately \$18,000 through a registered direct offering of 2.0 million shares of our common stock.
- In December 2016, we raised approximately \$13.0 million before issuance costs of approximately \$1.2 million through an underwritten public offering of approximately 12.1 million shares of our common stock.
- In September 2016, we entered into a Common Stock Purchase Agreement with Lincoln Park Capital Fund, LLC (Lincoln Park) granting us the right to sell shares of our common stock having an aggregate value of up to \$17.0 million. Under the terms of the agreement, Lincoln Park made an initial purchase of \$2.0 million in shares of common stock at a purchase price of \$1.50 per share. Subject to various limitations and conditions set forth in the agreement, including a \$1.00 minimum stock price, we may sell up to an additional \$15.0 million in shares of common stock, from time to time, at our sole discretion to Lincoln Park over a twenty-four month period beginning September 2016. In consideration for entering into the agreement, we issued 522,556 shares of common stock, having a value of \$721,000 based on the closing stock price on the date of grant, to Lincoln Park as a commitment fee. We incurred an additional \$133,000 in issuance costs. As of December 31, 2016, \$15.0 million in shares of common stock remain available under our Common Stock Purchase Agreement.
- In March 2016, we raised approximately \$6.9 million before issuance costs of approximately \$650,000 through an underwritten public offering of approximately 4.1 million shares of our common stock. The offering included the exercise in full of the underwriter's option to purchase up to an additional 529,411 shares of our common stock.
- In May 2015, we entered into an ATM agreement with Meyers Associates, L.P. Under the terms of the agreement, we may, from time to time, at our discretion, offer and sell shares of our common stock having an aggregate value of up to \$6.0 million. As of December 31, 2016, we have received gross proceeds of approximately \$3.1 million before issuance costs of approximately \$109,000 from the sale of 1.2 million shares of our common stock.
- During the year ended December 31, 2015, we received approximately \$3.3 million from the exercise of warrants to purchase 1.5 million shares of our common stock, which warrants were issued in connection with earlier financing transactions.
- During the three months ended March 31, 2015, we received gross proceeds of \$1.0 million as part of an ATM agreement we entered into with Meyers Associates, L.P. in June 2014. We have completed sales under this agreement, having received total proceeds of approximately \$4.5 million before issuance costs of approximately \$206,000 from the sale of 2.0 million shares of our common stock.
- In March 2014, we raised approximately \$13.9 million before issuance costs of approximately \$1.0 million through an underwritten public offering of 7.2 million shares of our common stock and warrants to purchase 2.1 million shares of our common stock.

Our capital requirements will depend on many factors, including, but not limited to, the rate at which ODMs and OEMs introduce products incorporating our PicoP® scanning technology and the market acceptance and competitive position of such products. Our ability to raise capital will depend on numerous factors, including the following:

- Market acceptance of products incorporating our PicoP® scanning technology;
- Changes in evaluations and recommendations by any securities analysts following our stock or our industry generally;
- Announcements by other companies in our industry;
- Changes in business or regulatory conditions;
- Announcements or implementation by our competitors of technological innovations or new products;
- The status of particular development programs and the timing of performance under specific development agreements;
- Economic and stock market conditions;
- The cost of filing, prosecuting, defending and enforcing any patent claims and other intellectual property rights;
- Our ability to establish cooperative development, joint venture and licensing arrangements; or
- Other factors unrelated to our company or industry.

If we are successful in establishing ODM or OEM co-development and joint venture arrangements, we expect our partners to fund certain non-recurring engineering costs for technology development and/or for product development. Nevertheless, we expect our capital requirements to remain high as we expand our activities and operations with the objective of commercializing our PicoP® scanning technology.

Contractual obligations

The following table lists our contractual obligations as of December 31, 2016 (in thousands):

Contractual Obligations	Payments Due By Period				
	less than 1 year	1-3 years	3-5 years	> 5 years	Total
Open purchase obligations *	\$ 6,420	\$ -	\$ -	\$ -	\$ 6,420
Minimum payments under operating leases	439	484	-	-	923
Minimum payments under long-term liabilities	32	53	-	-	85
Minimum payments under research, royalty and licensing agreements	12	24	24	36	96
	<u>\$ 6,903</u>	<u>\$ 561</u>	<u>\$ 24</u>	<u>\$ 36</u>	<u>\$ 7,524</u>

* Open purchase obligations represent commitments to purchase inventory, materials, capital equipment, maintenance agreements and other goods used in the normal operation of our business.
+ License and royalty obligations continue through the lives of the underlying patents, which is currently through at least 2024.

Recent accounting pronouncements

See Note 2, "Summary of significant accounting policies," in the Notes to the consolidated financial statements found in Part II, Item 8 of this Form 10-K.

ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

Interest Rate and Market Liquidity Risks

As of December 31, 2016, all of our cash and cash equivalents have variable interest rates. Therefore, we believe our exposure to market and interest rate risks is not material.

Our investment policy generally directs that the investment managers should select investments to achieve the following goals: principal preservation, adequate liquidity, and return. As of December 31, 2016, our cash and cash equivalents are comprised of short-term highly rated money market savings accounts. The values of cash and cash equivalents as of December 31, 2016, are as follows (in thousands):

	<u>Amount</u>	<u>Percent</u>
Cash and cash equivalents	\$ 15,139	100%
Less than one year	-	-
	<u>\$ 15,139</u>	<u>100%</u>

Foreign Exchange Rate Risk

Our major contract and collaborative research and development agreements, product sales, and licensing activity payments are currently made in U.S. dollars. However, in the future we may enter into contracts or collaborative research and development agreements in foreign currencies that may subject us to foreign exchange rate risk. We have entered into purchase orders and supply agreements in foreign currencies in the past and may enter into such arrangements, from time to time, in the future. We believe our exposure to currency fluctuations related to these arrangements is not material. We may enter into foreign currency hedges to offset material exposure to currency fluctuations when we can adequately determine the timing and amounts of the exposure.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Shareholders of
MicroVision, Inc.

We have audited the accompanying consolidated balance sheets of MicroVision, Inc. (the "Company") as of December 31, 2016, and the related consolidated statements of operations, shareholders' equity (deficit), and cash flows for each of the three years in the period ended December 31, 2016. Our audits also included the financial statement schedule listed in the Index at Item 15(A). These consolidated financial statements and financial statement schedule are the responsibility of the Company's management. Our responsibility is to express an opinion on these consolidated financial statements and financial statement schedule based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the consolidated financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the consolidated financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall consolidated financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the consolidated financial position of MicroVision, Inc. as of December 31, 2016 and 2015, and the consolidated results of its operations and its cash flows for each of the three years in the period ended December 31, 2016, in conformity with accounting principles generally accepted in the United States of America. Also, in our opinion, such financial statement schedule, when considered in relation to the basic consolidated financial statements taken as a whole, presents fairly, in all material respects, the information set forth therein.

The accompanying consolidated financial statements have been prepared assuming the Company will continue as a going concern. As discussed in Note 1 to the consolidated financial statements, the Company has incurred losses from operations and has an accumulated deficit, which raises substantial doubt about its ability to continue as a going concern. Management's plans regarding these matters are also described in Note 1. The consolidated financial statements do not include any adjustments that might result from the outcome of this uncertainty.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), MicroVision, Inc.'s internal control over financial reporting as of December 31, 2016, based on criteria established in *Internal Control - Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated March 6, 2017 expressed an unqualified opinion thereon.

/s/ Moss Adams LLP

MicroVision, Inc.
Notes to Consolidated Financial Statements
For the year ended December 31, 2016

1. THE COMPANY AND LIQUIDITY

MicroVision, Inc. is a pioneer in LBS technology that we market under our brand name PicoP®. We have developed our proprietary PicoP® scanning technology that can be adopted by our customers to create high-resolution miniature projection and three-dimensional sensing and image capture solutions. PicoP® scanning technology is based on our patented expertise in MEMS, laser diodes, opto-mechanics, and electronics and how those elements are packaged into a small form factor, lower power scanning engine that can display, interact and sense, depending on the needs of the application. For display, the engine can project a high-quality image on any surface (pico projection), a windshield (HUD), or a retina (AR). For sensing, we use IR lasers to capture three-dimensional data in the form of a point cloud. Interactivity uses the 3D sensing function and the display function to simultaneously project an image that the user can then interact with as one would a touch screen.

We have incurred significant losses since inception and expect to incur a significant loss during the fiscal year ending December 31, 2017. We have funded operations to date primarily through the sale of common stock, convertible preferred stock, warrants, the issuance of convertible debt and, to a lesser extent, from development contract revenues, product sales and licensing activities. At December 31, 2016, we had \$15.1 million in cash and cash equivalents.

Based on our current operating plan, and without additional proceeds from the sale of shares under our existing Common Stock Purchase Agreement or ATM facility discussed in Note 8, we anticipate that we have sufficient cash and cash equivalents to fund our operations into the third quarter of 2017. We will require additional capital to fund our operating plan past that time. We plan to obtain additional capital through the issuance of equity or debt securities, product sales and/or licensing activities. There can be no assurance that additional capital will be available or that, if available, it will be available on terms acceptable to us on a timely basis. If adequate capital resources are not available on a timely basis, we intend to consider limiting our operations substantially. This limitation of operations could include reducing our planned investment in our production capabilities or research and development projects, staff, operating costs, capital expenditures. Our ability to raise proceeds from the sale of shares under our Common Stock Purchase Agreement is subject to limitations and conditions, including a \$1.00 minimum stock price. In connection with our December 2016 underwritten public offering, we also agreed in the underwriting agreement not to issue shares pursuant to the Common Stock Purchase Agreement, or any other arrangement with Lincoln Park, for a period of six months from the date thereof without the consent of the underwriter.

Our capital requirements will depend on many factors, including, but not limited to, the rate at which ODMs or OEMs introduce products incorporating PicoP® scanning technology and the market acceptance and competitive position of such products. If revenues are less than anticipated, if the mix of revenues vary from anticipated amounts, or if expenses exceed the amounts budgeted, we may require additional capital earlier than expected to further the development of our technologies, for expenses associated with product development, and to respond to competitive pressures or to meet unanticipated development difficulties. In addition, our operating plan provides for the development of strategic relationships with systems and equipment manufacturers that may require additional investments by us.

These factors raise substantial doubt regarding our ability to continue as a going concern. These financial statements were prepared assuming we will continue as a going concern and do not include any adjustments that might be necessary should we be unable to continue as a going concern.

2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Use of estimates

The preparation of financial statements in conformity with generally accepted accounting principles of the United States requires us to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from our estimates. We have identified the following areas where estimates and assumptions have been made in preparing the financial statements: revenue recognition, inventory valuation, valuation of share-based payments, intangibles impairment assessment, depreciable lives assessment and related disclosure of contingent assets and liabilities.

Cash and cash equivalents and fair value of financial instruments

Fair value is defined as the exchange price that would be received for an asset or paid to transfer a liability in an orderly transaction between market participants. As such, fair value is a market-based measurement that should be determined based on assumptions that market participants would use in pricing an asset or liability. As a basis for considering such assumptions, the authoritative guidance establishes a three level fair value inputs hierarchy, and requires an entity to maximize the use of observable valuation inputs and minimize the use of unobservable inputs. We use market data, assumptions and risks we believe market participants would use in measuring the fair value of the asset or liability, including the risks inherent in the inputs and the valuation techniques.

Our financial instruments include cash and cash equivalents, accounts receivable, accounts payable and accrued liabilities. The carrying value of our financial instruments approximates fair value due to their short maturities. Our cash equivalents are comprised of short-term highly rated money market savings accounts.

Intangible assets

Our intangible assets consist exclusively of purchased patents. The patents are amortized using the straight-line method over their estimated period of benefit, ranging from one to seventeen years. Intangible assets are reviewed for impairment whenever events or changes in circumstances indicate the carrying value may not be recoverable. Recoverability of these assets is measured by comparison of their carrying values to the projected undiscounted net cash flows associated with the related intangible assets or group of assets over their remaining lives. Measurement of an impairment loss for our intangible assets is based on the difference between the fair value of the asset and its carrying value.

Inventory

Inventory consists of raw materials and finished goods assemblies. Inventory is computed using the first-in, first-out (FIFO) method and is stated at the lower of cost and net realizable value. Management periodically assesses the need to account for obsolescence of inventory and adjusts the carrying value of inventory to its net realizable value when required. In addition, we reduce the value of our inventory to its estimated scrap value when management determines that it is not probable that the inventory will be consumed through the normal course of business during the next twelve months.

Property and equipment

Property and equipment is stated at cost and depreciated over the estimated useful lives of the assets (two to five years) using the straight-line method. As our production needs change, we periodically assess the remaining estimated useful life of our production equipment. If necessary, we adjust the depreciation on our production equipment to reflect the remaining estimated useful life. Leasehold improvements are depreciated over the shorter of estimated useful lives or the lease term. Costs for repairs and maintenance are charged to expense as incurred and expenditures for major improvements are capitalized at cost. Gains or losses on the disposition of assets are reflected in the income statements at the time of disposal.

Restricted cash

As of December 31, 2016 and 2015, restricted cash was in money market savings accounts and serve as collateral for \$435,000 in irrevocable letters of credit. The restricted cash balance includes a letter of credit which is outstanding in connection with a lease agreement for our corporate headquarters building in Redmond, Washington. The balance is required over the term of the lease, which expires in January 2019.

Revenue recognition

We recognize revenue when: (i) persuasive evidence of an arrangement exists, (ii) delivery has occurred and there are no uncertainties regarding customer acceptance, (iii) fees are fixed or determinable, and (iv) collection is reasonably assured.

We generate revenue from many sources and activities. We enter into arrangements that can include various combinations of product sales, services, and licensing activities. For multiple-element arrangements, we use a hierarchy to determine the contract consideration to be used for allocating revenue to deliverables: (i) vendor-specific objective evidence of fair value (VSOE), (ii) third party evidence of selling price (TPE), and (iii) best estimate of selling price. To date, our sources can be classified as: product revenue, royalty revenue, contract revenue, or development revenue.

Product revenue

Product revenue is revenue from our sales of our products, which are MEMS and ASICs. Our product sales generally include acceptance provisions. We recognize product revenue upon acceptance of the product by the customer or the expiration of the contractual acceptance period, after which there are no rights of return. Our product revenue, from period to period, may vary substantially due to the timing of product orders from customers, product shipments, production constraints and availability of components and raw materials.

Fulfillment and delivery of the backlog is dependent upon the successful supply chain development and delivery of required components to us. From time to time, raw materials and manufacturing delays and components received that do not meet quality standards have resulted in delivery delays to our customers.

Royalty revenue

Royalty revenue is revenue under license agreements to our PicoP® scanning technology. We recognize revenue on upfront license fees over the expected time frame that we provide services or have ongoing obligations under the agreement. Ongoing per unit royalties are recognized when reported by our customer to us on a quarterly basis. Currently, we recognize revenue for ongoing per unit royalties one quarter in arrears when reported by our customer, representing when such amounts are fixed and determinable, and all other revenue recognition criteria are met.

Contract revenue

Contract revenue includes revenue from support service contracts and the sale of prototype units and evaluation kits based on our PicoP® scanning engine. Our contract revenue in a particular period is dependent upon when we enter into a contract, the value of the contracts we have entered into, and the availability of technical resources to perform work on the contracts. We recognize contract revenue related to the sale of prototype units and evaluation kits upon acceptance of the deliverables by the customer or expiration of the contractual acceptance period, after which there are no rights of return.

We recognize contract revenue on long-term, cost plus fixed fee, and fixed price contracts using the percentage-of-completion method. Under the percentage-of-completion method, revenue is recognized as work progresses on the contract. The percentage-of-completion method relies on estimates of total expected contract revenue and costs. At the end of each period, we estimate the labor, material and other costs required to complete the contract using data provided by our technical team, project managers, vendors, outside consultants, and others and compare these to costs incurred to date.

Recognized revenues are subject to amendments for actual costs incurred. Amendments to revenue and costs to complete estimates are recognized in the period in which the facts become known. In the future, amendments to estimates could significantly impact recognized revenue in any one reporting period. If we are unable to estimate costs on a contract, revenue is recognized using the completed-contract method. Under the completed-contract method, revenue and contract costs are deferred and both are recognized when all deliverables are completed.

Development revenue

Development revenue is revenue from performance on collaborative research and development agreements with commercial customers researching and developing commercial applications for our technology. We evaluate the performance criteria and terms of our collaborative research and development agreements to determine whether revenue should be recognized under a performance-based method or milestone method. Significant items included in our evaluation include the following:

- The nature of our obligation under the agreement;
- Whether provisions leading to variable revenues exist;

- Whether any payments are refundable;
- Whether the deliverables should be treated as one unit of accounting or separated into multiple units;
- Whether substantive milestones exist;
- Whether milestone payments are commensurate with either our level of effort or the increase in value of the customer's rights; and
- Whether a licensing agreement exists.

At the end of each period, we evaluate total estimated costs for each agreement. Amendments to the estimated costs are recognized in the period in which the facts become known. The costs for work performed under collaborative research and development agreements are expensed in the periods incurred and included in the statement of operations in research and development expense.

Cost of product revenue

Cost of product revenue includes the direct and allocated indirect costs of products sold to customers. Direct costs include labor, materials, reserves for estimated warranty expenses, and other costs incurred directly, or charged to us by our contract manufacturers in the manufacture of these products. Indirect costs include labor, manufacturing overhead, and other costs associated with operating our manufacturing capabilities and capacity. Manufacturing overhead includes the costs of procuring, inspecting and storing material, facility and other costs, and is allocated to cost of product revenue based on the proportion of indirect labor which supported production activities. The cost of product revenue can fluctuate significantly from period to period, depending on the product mix and volume, the level of manufacturing overhead expense and the volume of direct material purchased.

Cost of contract revenue

Cost of contract revenue includes both the direct and allocated indirect costs of performing on contracts and producing prototype units and evaluation kits based on our PicoP® scanning engine. Direct costs include labor, materials and other costs incurred directly in producing prototype units and evaluation kits or performing on a contract. Indirect costs include labor and other costs associated with operating our research and development department and building our technical capabilities and capacity. Cost of contract revenue is determined by the level of direct and indirect costs incurred, which can fluctuate substantially from period to period.

Our overhead, which includes the costs of procuring, inspecting and storing material, and facility and depreciation costs, is allocated to inventory, cost of product revenue, cost of contract revenue, and research and development expense based on the level of effort supporting production or research and development activity.

Concentration of credit risk and major customers and suppliers

Concentration of credit risk

Financial instruments that potentially subject us to a concentration of credit risk are primarily cash equivalents and accounts receivable. We typically do not require collateral from our customers. As of December 31, 2016, our cash and cash equivalents are comprised of short-term highly rated money market savings accounts.

Concentration of major customers and suppliers

In 2016, one commercial customer accounted for \$13.5 million in revenue, representing 91% of our total revenue. In 2015, the same commercial customer accounted for \$9.0 million in revenue, representing 98% of our total revenue. In 2014, the same commercial customer accounted for \$2.0 million in revenue, representing 58% of our total revenue, and a second commercial customer accounted for \$577,000 in revenue, representing 17% of our total revenue.

In 2016, one commercial customer accounted for \$182,000, or 74% of our net accounts receivable balance, and a second commercial customer accounted for \$54,000, or 22% of our net accounts receivable balance. In 2015, one commercial customer accounted for \$1.5 million, or 91% of our net accounts receivable balance.

A significant concentration of our components and the products we sell are currently manufactured and obtained from single or limited-source suppliers, which are primarily located in foreign countries. The loss of any single or limited-source supplier, the failure of any of these suppliers to perform as expected, or the disruption in the supply chain of components from these suppliers could subject us to risks and uncertainties regarding, but not limited to, increased cost of sales, possible loss of revenues, or significant delays in product deliveries, any of which could adversely affect our financial condition and operating results.

Income taxes

Deferred tax assets and liabilities are recorded for differences between the financial statement and tax bases of the assets and liabilities that will result in taxable or deductible amounts in the future, based on enacted tax laws and rates applicable to the periods in which the differences are expected to affect taxable income. Valuation allowances are established when necessary to reduce deferred tax assets to the amount expected to be realized. Income tax expense is recorded for the amount of income tax payable for the period increased or decreased by the change in deferred tax assets and liabilities during the period.

Net loss per share

Basic net loss per share is calculated using the weighted-average number of common shares outstanding during the periods. Net loss per share, assuming dilution, is calculated using the weighted-average number of common shares outstanding and the dilutive effect of all potentially dilutive securities, including common stock equivalents and convertible securities. Net loss per share, assuming dilution, is equal to basic net loss per share because the effect of dilutive securities outstanding during the periods, including options and warrants computed using the treasury stock method, is anti-dilutive.

The components of basic and diluted net loss per share were as follows (in thousands, except loss per share data):

	Year Ended December 31,		
	2016	2015	2014
Numerator:			
Net loss available for common shareholders	\$ (16,472)	\$ (14,542)	\$ (18,120)
Denominator:			
Weighted-average common shares outstanding	51,958	46,540	41,599
Net loss per share - basic and diluted	\$ (0.32)	\$ (0.31)	\$ (0.44)

During each of the years ended December 31, 2016, 2015 and 2014, we excluded the following securities from net loss per share as the effect of including them would have been anti-dilutive. The shares shown represent the number of shares of common stock which would be issued upon conversion in the respective years shown below (in thousands):

	Year Ended December 31,		
	2016	2015	2014
Options outstanding and warrants exercisable	7,764	8,185	8,953
Nonvested restricted stock units	60	60	60
	<u>7,824</u>	<u>8,245</u>	<u>9,013</u>

Research and development

Research and development expense consists of compensation related costs of employees and contractors engaged in internal research and product development activities, direct material to support development programs, laboratory operations, outsourced development and processing work, and other operating expenses. We assign our research and development resources based on the business opportunity of the available projects, the skill mix of the resources available and the contractual commitments we have made to our customers. Research and development costs are expensed as incurred. We believe that a substantial level of continuing research and development expense will be required to further develop our technology.

Share-based compensation

We issue share-based compensation to employees in the form of stock options and restricted stock units (RSUs). We account for the share-based awards by recognizing the fair value of share-based compensation expense on a straight-line basis over the service period of the award, net of estimated forfeitures. The fair value of stock options is estimated on the grant date using the Black-Scholes option pricing model. The fair value of RSUs is determined by the closing price of our common stock on the grant date. Changes in estimated inputs or using other option valuation methods may result in materially different option values and share-based compensation expense.

The following table summarizes the amount of share-based compensation expense by line item on the Statement of Operations (in thousands):

	Year Ended December 31,		
	2016	2015	2014
Cost of product revenue	\$ 37	\$ 19	\$ -
Cost of contract revenue	-	-	28
Research and development expense	350	282	34
Sales, marketing, general and administrative expense	836	706	651
	<u>\$ 1,223</u>	<u>\$ 1,007</u>	<u>\$ 713</u>

Reclassifications

Certain reclassifications have been made to prior year financial statements to conform to classifications used in the current year. These reclassifications had no impact on net loss, shareholders' equity or cash flows, as previously reported.

Recent accounting pronouncements

In November 2016, the Financial Accounting Standards Board (FASB) issued Accounting Standards Update 2016-18 (ASU 2016-18), Restricted Cash. The standard requires restricted cash and cash equivalents to be included with cash and cash equivalents on the statement of cash flows. The new standard is effective for fiscal years, and interim periods within those fiscal years, beginning after December 15, 2017, with early adoption permitted. The new guidance shall be applied using a retrospective approach. As of December 31, 2016 and 2015, we have \$435,000 of restricted cash, and as such we do not expect the implementation of this standard to have a material effect on our financial statements.

In August 2016, the FASB issued Accounting Standards Update 2016-15 (ASU 2016-15), Statement of Cash Flows (Topic 230): Clarification of Certain Cash Receipts and Cash Payments. The objective of ASU 2016-15 is to eliminate the diversity in practice related to the classification of certain receipts and payments in the statement of cash flows, by adding or clarifying guidance on eight specific cash flow issues. For public business entities, ASU 2016-15 is effective for annual and interim reporting periods beginning after December 15, 2017, with early adoption permitted. The amendments in this update should be applied retrospectively to all periods presented, unless deemed impracticable, in which case, prospective application is permitted. We do not expect the implementation of this standard to have a material effect on our financial statements.

In June 2016, the FASB issued Accounting Standards Update 2016-13 (ASU 2016-13), Financial Instruments - Credit Losses (Topic 326): Measurement of Credit Losses on Financial Instruments. ASU 2016-13 amends the impairment model to utilize an expected loss methodology in place of the currently used incurred loss methodology, which will result in the more timely recognition of losses. ASU 2016-13 is effective for public entities with fiscal years, and interim periods within those fiscal years, beginning after December 15, 2019. Early adoption is permitted for fiscal years, and interim periods within those fiscal years, beginning after December 15, 2018. The new guidance shall be applied on a modified-retrospective approach. We do not expect the implementation of this standard to have a material effect on our financial statements.

In March 2016, the FASB issued Accounting Standards Update 2016-09 (ASU 2016-09), Improvements to Employee Share-Based Payment Accounting. ASU 2016-09 simplifies several aspects of the accounting for share-based payment award transactions including a) income tax consequences; b) classification of awards as either equity or liabilities; and c) classification on the statement of cash flows. ASU 2016-09 is effective for public entities in the fiscal years beginning after December 15, 2016, and for interim periods within those fiscal years. Various elements of the amendments will be applied using either a modified retrospective transition method, retrospectively, or prospectively. Early adoption is permitted. We do not expect the implementation of this standard to have a material effect on our financial statements.

In February 2016, the FASB issued Accounting Standards Update 2016-02 (ASU 2016-02), Leases (Topic 842). ASU 2016-02 requires lessees to recognize a right-of-use asset and lease liability in the balance sheet for all leases, including operating leases, with terms of more than twelve months. Recognition, measurement and presentation of expenses and cash flows from a lease by a lessee have not significantly changed from previous guidance. The amendments also require qualitative disclosures along with specific quantitative disclosures. The new guidance will be effective for fiscal years beginning after December 15, 2018, and interim periods within those years, with early adoption permitted. The amendments must be applied on a modified retrospective basis. We anticipate the adoption of this standard will have a material impact on our financial statements. While we are continuing to assess all the potential impacts of the standard, we currently believe the most significant impact relates to our accounting for our office lease. Under the new guidance, the net present value of the obligation for our office lease will appear on the balance sheet. Currently, it is classified as an operating lease and payments are expensed in the period incurred.

In November 2015, the FASB issued Accounting Standards Update 2015-17 (ASU 2015-17), Income Taxes: Balance Sheet Classification of Deferred Taxes. ASU 2015-17 eliminates the current requirement to present deferred tax liabilities and assets as current and non-current on the balance sheet and requires that all deferred tax liabilities and assets and any related valuation allowance, be classified as non-current on the balance sheet. ASU 2015-17 is effective for public entities in fiscal years beginning after December 15, 2016, and for the interim periods within those fiscal years. The new guidance can be applied retrospectively or prospectively and early adoption is permitted. We do not expect the implementation of this standard to have a material effect on our financial statements as our net deferred tax assets are reduced to \$0 by a full valuation allowance.

In July 2015, the FASB issued Accounting Standards Update 2015-11 (ASU 2015-11), Inventory (Topic 330): Simplifying the Measurement of Inventory, which changes the measurement principle for inventory from the lower of cost or market to the lower of cost and net realizable value. ASU 2015-11 defines net realizable value as estimated selling prices in the ordinary course of business, less predictable costs of completion, disposal, and transportation. The new guidance must be applied on a prospective basis and is effective for fiscal years beginning after December 15, 2016, and interim periods within those years, with early adoption permitted. We do not expect the implementation of this standard to have a material effect on our financial statements.

In May 2014, the FASB issued Accounting Standards Update 2014-09 (ASU 2014-09), Revenue from Contracts with Customers, an updated standard on revenue recognition. The core principle of the new standard is for companies to recognize revenue to depict the transfer of goods or services to customers in amounts that reflect the consideration to which the company expects to be entitled in exchange for those goods or services. The new standard also will result in enhanced disclosures about revenue, provide guidance for transactions that were not previously addressed comprehensively, and improve guidance for multiple-element arrangements. ASU 2014-09 will be effective for us as of January 1, 2018, with early adoption permitted as of January 1, 2017. We have chosen to implement the new standard as of January 1, 2018 using the full retrospective approach, meaning we will restate each prior reporting period presented. We have performed a review of our revenue generated from significant product and service contracts with customers subject to ASU 2014-09, and we expect the implementation of this standard to have a material impact on our financial statements. While we are continuing to assess all potential impacts of this standard, we currently believe the most significant impact relates to our accounting for the \$8.0 million upfront license fee payment under the PicoP® scanning technology license agreement we signed with Sony in March 2015. Under current guidance, we are recognizing the upfront license fee payment of \$8.0 million on a straight-line basis over a period of eight years. Under the new guidance, we expect to recognize the entire \$8.0 million upfront license fee payment in the first quarter of 2015, which will increase 2015 revenues by \$7.2 million, and reduce reported 2016 revenues by \$1.0 million. We currently expect no changes to the timing of our recognition of the ongoing per unit royalties; they will continue to be recognized one quarter in arrears when reported by Sony. We expect revenue related to our components sales to remain substantially unchanged.

3. LONG-TERM CONTRACTS

In March 2015, we signed a license agreement with Sony for our PicoP® scanning technology. The license agreement granted Sony a non-exclusive license to our technology to incorporate into display modules it manufactures and sells for up to eight years. As part of the agreement, we received an \$8.0 million upfront license fee in March 2015, and we will receive ongoing per unit royalties for each display module it sells.

In October 2014, we entered into a \$1.5 million agreement with Sony for display module support services as part of the production readiness and commercialization of display modules incorporating PicoP® scanning technology. We recognized the full contract value of \$1.5 million in revenue in June 2015, having completed all deliverables and obligations under the agreement.

The following table summarizes the costs incurred on our revenue contracts (in thousands):

	December 31,	
	2016	2015
Costs and estimated earnings incurred on uncompleted contracts	\$ 193	\$ -
Billings on uncompleted contracts	(236)	-
	<u>\$ (43)</u>	<u>\$ -</u>
Included in consolidated balance sheets under the following captions:		
Other current assets	\$ 125	\$ -
Billings on uncompleted contracts in excess of related costs	(168)	-
	<u>\$ (43)</u>	<u>\$ -</u>

4. INVENTORY

Inventory consists of the following (in thousands):

	December 31,	
	2016	2015
Raw materials	\$ 999	\$ 232
Finished goods	234	630
	<u>\$ 1,233</u>	<u>\$ 862</u>

We recorded inventory write-downs of \$187,000 in 2016, \$287,000 in 2015, and \$42,000 in 2014. At December 31, 2016 and 2015, we recorded aggregate write-downs of \$6.6 million and \$6.9 million, respectively, offsetting inventory on-hand deemed to be obsolete or scrap inventory. We may enter into arrangements to sell the obsolete or scrap inventory resulting in a gain in the period such transactions are realized.

5. ACCRUED LIABILITIES

Accrued liabilities consists of the following (in thousands):

	December 31,	
	2016	2015
Bonuses	\$ 1,350	\$ 1,150
Adverse purchase commitments	500	500
Payroll and payroll taxes	398	353
Compensated absences	393	357
Warranty	316	239
Relocation	204	85
Deferred rent credit	158	146
Other	563	569
	<u>\$ 3,882</u>	<u>\$ 3,399</u>

6. PROPERTY AND EQUIPMENT

Property and equipment consists of the following (in thousands):

	<u>December 31,</u>	
	<u>2016</u>	<u>2015</u>
Production equipment	\$ 4,580	\$ 4,150
Leasehold improvements	494	494
Computer hardware and software/lab equipment	4,968	4,618
Office furniture and equipment	1,096	1,087
	<u>11,138</u>	<u>10,349</u>
Less: Accumulated depreciation	<u>(9,601)</u>	<u>(8,680)</u>
	<u>\$ 1,537</u>	<u>\$ 1,669</u>

Depreciation expense was \$1.1 million in 2016, \$429,000 in 2015, and \$414,000 in 2014. In the fourth quarter of 2016, we recorded additional depreciation expense of \$297,000, as a result of a change in the estimated useful life of production equipment to be replaced in connection with our current business strategy to sell LBS engines directly to ODMs and OEMs.

Capital leases are collateralized by the related assets financed and by security deposits held by the lessors under the lease agreements. The cost and accumulated depreciation of equipment under capital leases was \$704,000 in each of the years ended December 31, 2016 and 2015.

7. INTANGIBLE ASSETS

Our intangible assets consist exclusively of technology-based purchased patents. The gross value of our intangible assets was \$1.6 million in each of the years ended December 31, 2016 and 2015. Amortization expense was \$127,000 in 2016, \$128,000 in 2015, and \$132,000 in 2014. In 2016 and 2015, there were no impairments recorded and none of our patents were abandoned in prosecution. In 2014, we recorded an impairment amounting to \$40,000 on five patents that were abandoned in prosecution. The following table outlines our estimated future amortization expense related to intangible assets held at December 31, 2016 (in thousands):

<u>Years Ended December 31,</u>	<u>Amount</u>
2017	\$ 116
2018	115
2019	115
2020	98
2021	80
Thereafter	194
	<u>\$ 718</u>

8. COMMON STOCK

In December 2016, we raised approximately \$2.1 million before issuance costs of approximately \$18,000 through a registered direct offering of 2.0 million shares of our common stock.

In December 2016, we raised approximately \$13.0 million before issuance costs of approximately \$1.2 million through an underwritten public offering of approximately 12.1 million shares of our common stock.

In September 2016, we entered into a Common Stock Purchase Agreement with Lincoln Park granting us the right to sell shares of our common stock having an aggregate value of up to \$17.0 million. Under the terms of the agreement, Lincoln Park made an initial purchase of \$2.0 million in shares of common stock at a purchase price of \$1.50 per share. Subject to various limitations and conditions set forth in the agreement, including a \$1.00 minimum stock price, we may sell up to an additional \$15.0 million in shares of common stock, from time to time, at our sole discretion to Lincoln Park over a twenty-four month period beginning September 2016. In consideration for entering into the agreement, we issued 522,556 shares of common stock, having a value of \$721,000 based on the closing stock price on the date of grant, to Lincoln Park as a commitment fee. We incurred an additional \$133,000 in issuance costs. As of December 31, 2016, \$15.0 million in shares of common stock remain available under our Common Stock Purchase Agreement. In connection with our December 2016 underwritten public offering, we also agreed in the underwriting agreement not to issue shares pursuant to the Common Stock Purchase Agreement, or any other arrangement with Lincoln Park, for a period of six months from the date thereof.

In March 2016, we raised approximately \$6.9 million before issuance costs of approximately \$650,000 through an underwritten public offering of approximately 4.1 million shares of our common stock. The offering included the exercise in full of the underwriter's option to purchase up to an additional 529,411 shares of our common stock.

In May 2015, we entered into an ATM agreement with Meyers Associates, L.P. Under the terms of the agreement, we may, from time to time, at our discretion, offer and sell shares of our common stock having an aggregate value of up to \$6.0 million. As of December 31, 2016, we have received gross proceeds of approximately \$3.1 million before issuance costs of approximately \$109,000 from the sale of 1.2 million shares of our common stock.

During the year ended December 31, 2015, we received approximately \$3.3 million from the exercise of warrants to purchase 1.5 million shares of our common stock, which warrants were issued in connection with earlier financing transactions.

During the three months ended March 31, 2015, we received gross proceeds of approximately \$1.0 million as part of an ATM agreement we entered into with Meyers Associates, L.P. in June 2014. We have completed sales under this agreement, having received total proceeds of approximately \$4.5 million before issuance costs of approximately \$206,000 from the sale of 2.0 million shares of our common stock.

In March 2014, we raised approximately \$13.9 million before issuance costs of approximately \$1.0 million through an underwritten offering of 7.2 million shares of our common stock and warrants to purchase 2.1 million shares of our common stock.

In February 2014, we issued 3.7 million shares of our common stock under the exchange provisions of the warrants issued in connection with our May and September 2013 financing activities. We recognized a loss of \$5.0 million on the exchange as the fair market value of the common stock issued was greater than the obligation recorded due to an increase in our stock price since December 31, 2013.

9. WARRANTS

The warrants to purchase 2.1 million shares of our common stock that we sold in our March 2014 offering have an exercise price of \$2.47 per share and expire on the fifth anniversary of the date of issuance.

In combination with our registered direct offerings of common stock in May 2013 and September 2013, we issued warrants to purchase common stock. At each balance sheet date that the warrants were outstanding, we evaluated the fair value of the warrants and any change in value was recorded as a non-operating gain or loss on the statement of operations. Due to the conditional exchange provision of the warrants, the determination of the fair value of the warrant liability varied depending on our common stock price.

In February 2014, we issued 3.7 million shares of our common stock under the exchange provision of our then-outstanding warrants. We did not receive additional cash consideration in the exchange transaction. We recorded a loss of \$5.0 million during the year ended December 31, 2014 on the exchange, as the fair market value of the common stock issued was greater than the obligation recorded due to the increase in stock price from December 31, 2013 to the date the warrants were exchanged.

The following table summarizes activity with respect to our common stock warrants for the periods shown below (in thousands):

	Warrants to purchase common shares	Weighted- average exercise price
Outstanding at January 1, 2014	8,091	\$ 3.07
Granted:		
Exercise price less than intrinsic value	-	-
Exercise price greater than intrinsic value	2,148	2.47
Exercised	(3,713)	2.67
Canceled/expired	-	-
Outstanding at December 31, 2014	<u>6,526</u>	3.08
Granted:		
Exercise price less than intrinsic value	-	-
Exercise price greater than intrinsic value	-	-
Exercised	(1,487)	2.19
Canceled/expired	-	-
Outstanding at December 31, 2015	<u>5,039</u>	3.34
Granted:		
Exercise price less than intrinsic value	-	-
Exercise price greater than intrinsic value	-	-
Exercised	-	-
Canceled/expired	(1,278)	6.24
Outstanding at December 31, 2016	<u><u>3,761</u></u>	\$ 2.23
Exercisable at December 31, 2016	<u><u>3,761</u></u>	\$ 2.23

There were no common stock warrants issued in 2016 or 2015.

The following table summarizes information about our common stock warrants outstanding and exercisable at December 31, 2016 (in thousands):

Range of exercise prices	Warrants outstanding			Warrants exercisable	
	Outstanding at December 31, 2016	Weighted- average remaining contractual term (in years)	Weighted- average exercise price	Exercisable at December 31, 2016	Weighted- average exercise price
\$1.76 - \$3.08	<u>3,761</u>	1.38	\$ 2.23	<u>3,761</u>	\$ 2.23
	<u><u>3,761</u></u>			<u><u>3,761</u></u>	

10. SHARE-BASED COMPENSATION

We use the straight-line attribution method to allocate the fair value of share-based compensation awards over the requisite service period for each award. The valuation of and accounting for share-based awards includes a number of complex and subjective estimates. These estimates include, but are not limited to, the future volatility of our stock price, future stock option exercise behaviors, estimated employee turnover, and award forfeiture rates. We recognized \$1.2 million, \$1.0 million, and \$713,000 in share-based compensation expense for the years ended December 31, 2016, 2015, and 2014, respectively. During the year ended December 31, 2014, we reduced the share-based compensation expense by \$344,000 to adjust estimated forfeitures to actual.

Description of Incentive Plans

We currently have two share-based incentive plans; the 2013 Incentive Plan and the Independent Director Stock Option Plan.

The 2013 Incentive Plan has 7.8 million shares authorized, of which 2.0 million shares were available for awards as of December 31, 2016. The Independent Director Stock Option Plan has 113,000 shares authorized, of which 19,000 shares or awards relating thereto were issued and outstanding as of December 31, 2016. In June 2008, we determined not to issue additional options from the Independent Director Stock Option Plan.

Options Valuation Methodology and Assumptions

We use the Black-Scholes option valuation model to determine the fair value of options granted and use the closing price of our common stock as the fair market value of our stock on that date.

We consider historical stock price volatilities, volatilities of similar companies and other factors in determining estimates of future volatilities.

We use historical lives, including post-termination exercise behavior, as the basis for estimating expected lives.

Risk-free rates are based on the U.S. Treasury Yield Curve, as published by the U.S. Treasury.

The following table summarizes the weighted-average valuation assumptions and weighted-average grant date fair value of options granted during the periods shown below:

	Year Ended December 31,		
	2016	2015	2014
Assumptions (weighted-average)			
Volatility	84%	98%	100%
Expected term (in years)	4.0	4.0	4.0
Risk-free rate	1.2%	1.3%	1.3%
Expected dividends	0.0%	0.0%	0.0%
Pre-vest forfeiture rate	8.5%	8.5%	8.5%
Grant date fair value of options granted	\$ 1.12	\$ 2.20	\$ 1.22

Options Activity and Positions

The following table summarizes activity and positions with respect to options for the periods shown below (in thousands):

Options	Shares	Weighted- average exercise price	Weighted- average remaining	Aggregate
			contractual term (in years)	intrinsic value
Outstanding as of January 1, 2014	1,905	\$ 8.86	7.4	\$ 1,500
Granted	717	1.78	-	-
Exercised	-	-	-	-
Forfeited or expired	(195)	9.49	-	-
Outstanding as of December 31, 2014	2,427	6.72	7.4	18,700
Granted	849	3.23	-	-
Exercised	(23)	1.88	-	-
Forfeited or expired	(107)	13.98	-	-
Outstanding as of December 31, 2015	3,146	5.56	7.3	1,613
Granted	1,167	1.83	-	-
Exercised	(3)	1.77	-	-
Forfeited or expired	(307)	12.58	-	-
Outstanding as of December 31, 2016	4,003	\$ 3.94	7.3	\$ 4
Vested and expected to vest as of December 31, 2016	3,747	\$ 4.06	7.2	\$ 3
Exercisable as of December 31, 2016	2,032	\$ 5.61	5.8	\$ -

The intrinsic value of options exercised during the year ended December 31, 2016 was \$3,000 compared to \$29,000 in 2015. There were no option exercises during the year ended December 31, 2014.

The total grant date fair value of options vested during the years ended December 31, 2016, 2015 and 2014 was \$998,000, \$591,000 and \$3.3 million, respectively. As of December 31, 2016, our unamortized share-based compensation was \$2.4 million related to options, which we plan to amortize over the next 2.7 years.

As of December 31, 2016, our unamortized share-based compensation related to the RSUs was \$50,000, which we plan to amortize over the next five months.

11. COMMITMENTS AND CONTINGENCIES

Litigation

On March 31, 2014, Asia Optical Co., Inc., a supplier pursuant to an agreement entered into in 2008, filed a complaint for arbitration with the American Arbitration Association, claiming that we ordered products from them and failed to take delivery of and pay for such products. The relief sought in the complaint is \$3.6 million plus attorneys' fees, interest and arbitration costs. We contest the claim and are defending against it. An adverse outcome of these proceedings could materially and adversely affect our financial condition. At this stage, we cannot predict the likelihood of an unfavorable outcome or the range of potential loss.

We are also subject to various claims and pending or threatened lawsuits in the normal course of business. We are not currently party to any legal proceedings that management believes are reasonably possible to have a material adverse effect on our financial position, results of operations or cash flows.

Purchase commitments

At December 31, 2016, we had \$6.4 million in open purchase obligations that represent commitments to purchase inventory, materials, capital equipment, and other goods used in the normal operation of our business.

Lease commitments

We lease our office space and certain equipment under operating leases with initial or remaining terms in excess of one year. Future minimum rental commitments under operating leases for years ending December 31, are as follows (in thousands):

Years Ended December 31,	Operating leases
2017	\$ 439
2018	446
2019	38
2020	-
2021	-
Thereafter	-
Total minimum lease payments	<u>\$ 923</u>

Net rent expense was \$483,000 in 2016, \$465,000 in 2015, and \$542,000 in 2014.

Adverse purchase commitments

We have periodically entered into noncancelable purchase contracts in order to ensure the availability of materials to support production of our products. We continuously assess our outstanding commitments and recognize a loss on purchase commitments, when required, if such commitments are in excess of our product needs or the costs are not expected to be recoverable. As of December 31, 2016, we have \$500,000 accrued for commitments to purchase materials for the SHOWWXTM pico projector that were in excess of estimated future proceeds from sales of that product.

12. INCOME TAXES

A provision for income taxes has not been recorded for 2016, 2015 and 2014, due to the valuation allowances placed against the net operating losses and deferred tax assets arising during such periods. A valuation allowance has been recorded for all deferred tax assets. Based on our history of losses since inception, the available objective evidence creates sufficient uncertainty regarding the realizability of the deferred tax assets.

At December 31, 2016, we have net operating loss carryforwards of approximately \$371.6 million for federal income tax reporting purposes. In addition, we have research and development tax credits of \$7.0 million. The net operating loss carryforwards and research and development credits available to offset future taxable income, if any, will expire in varying amounts from 2018 to 2036, if not previously used.

In addition to the tax benefits above, we have \$310,000 of capital loss carryforwards that are scheduled to expire in 2017. In certain circumstances, as specified in the Internal Revenue Code, a 50% or more ownership change by certain combinations of our shareholders during any three year period would result in limitations on our ability to use a portion of our net operating loss carryforwards.

Deferred tax assets are summarized as follows (in thousands):

	December 31,	
	2016	2015
Deferred tax assets, current		
Reserves	\$ 2,351	\$ 2,581
Other	910	749
Total gross deferred tax assets, current	<u>3,261</u>	<u>3,330</u>
Deferred tax assets, non-current		
Net operating loss carryforwards	126,335	122,281
R&D credit carryforwards	6,998	6,747
Depreciation/amortization deferred	20,024	20,848
Deferred revenue	2,091	-
Other	8,135	7,954
Total gross deferred tax assets, non-current	<u>163,583</u>	<u>157,830</u>
Net deferred taxes before valuation allowance	166,844	161,160
Less: Valuation allowance	(166,844)	(161,160)
Deferred tax assets	<u>\$ -</u>	<u>\$ -</u>

The valuation allowance, permanent items, and the research and development credit carryforwards account for substantially all of the difference between our effective income tax rate and the federal statutory tax rate of 34%.

Certain net operating losses arise from the deductibility for tax purposes of compensation under nonqualified stock options equal to the difference between the fair value of the stock on the date of exercise and the exercise price of the options. For financial reporting purposes, the tax effect of this deduction, when recognized, is accounted for as a credit to shareholders' equity.

We did not have any unrecognized tax benefits at December 31, 2016 or 2015.

We recognize interest accrued and penalties related to unrecognized tax benefits in tax expense. During the years ended December 31, 2016, 2015, and 2014, we did not recognize any interest or penalties.

We file income tax returns in the U.S. federal jurisdiction and various states. Due to our operating loss and credit carryforwards, the U.S. federal statute of limitations remains open for 1998 and onward.

13. RETIREMENT SAVINGS PLAN

We have a retirement savings plan that qualifies under Internal Revenue Code Section 401(k). The plan covers all qualified employees. Contributions to the plan are made at the discretion of our Board of Directors. During the years ended December 31, 2016 and 2015, we contributed \$214,000 and \$108,000 to the plan, respectively. There were no contributions to the plan during 2014.

14. QUARTERLY FINANCIAL INFORMATION (Unaudited)

The following table summarizes our unaudited quarterly financial information for the periods shown below (in thousands, except per share data):

	Fiscal Year 2016			
	December 31,	September 30,	June 30,	March 31,
Revenue	\$ 2,905	\$ 4,000	\$ 4,155	\$ 3,701
Gross profit	505	1,207	1,563	1,112
Net loss	(5,370)	(4,070)	(3,476)	(3,553)
Net loss per share, basic and diluted	(0.09)	(0.08)	(0.07)	(0.07)

	Fiscal Year 2015			
	December 31,	September 30,	June 30,	March 31,
Revenue	\$ 1,846	\$ 2,398	\$ 4,043	\$ 901
Gross profit	379	585	1,187	(143)
Net loss	(4,298)	(3,513)	(2,769)	(3,962)
Net loss per share, basic and diluted	(0.09)	(0.07)	(0.06)	(0.09)

ITEM 9. CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE

There have been no changes in or disagreements with accountants on accounting or financial disclosure matters during our fiscal years ended December 31, 2016, 2015 and 2014.

ITEM 9A. CONTROLS AND PROCEDURES

(a) *Evaluation of Disclosure Controls and Procedures.* Our Chief Executive Officer (CEO) and the Chief Financial Officer (CFO) evaluated our disclosure controls and procedures (as defined in Rules 13a-15(e)) under the Securities and Exchange Act of 1934, as amended (the "Exchange Act"), prior to the filing of this Form 10-K. Based upon that evaluation, our CEO and CFO concluded that, as of December 31, 2016, our disclosure controls and procedures were effective.

(b) *Management's Report on Internal Control Over Financial Reporting.* Our management is responsible for establishing and maintaining adequate internal control over financial reporting, as such term is defined in Exchange Act Rules 13a-15(f). Our management conducted an evaluation of the effectiveness of our internal control over financial reporting based on the framework in *Internal Control - Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based on its evaluation under the framework in *Internal Control - Integrated Framework (2013)*, our management concluded that our internal control over financial reporting was effective as of December 31, 2016.

(c) *Limitations on the Effectiveness of Controls.* Because of inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

The effectiveness of our internal control over financial reporting as of December 31, 2016 has been audited by Moss Adams LLP, an independent registered public accounting firm, as stated in its report, which is included herein.

(d) *Changes in Internal Control Over Financial Reporting.* There was no change in our internal control over financial reporting during the quarter ended December 31, 2016 which has materially affected, or is reasonably likely to materially affect, our internal control over financial reporting.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Shareholders of
MicroVision, Inc.

We have audited MicroVision, Inc.'s (the "Company") internal control over financial reporting as of December 31, 2016, based on criteria established in *Internal Control - Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission. The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management's Report on Internal Control over Financial Reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audit also included performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, MicroVision, Inc. maintained, in all material respects, effective internal control over financial reporting as of December 31, 2016, based on criteria established in *Internal Control - Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheets of MicroVision, Inc. as of December 31, 2016 and 2015, and the consolidated statements of operations, shareholders' equity (deficit), and cash flows for each of the three years in the period ended December 31, 2016, and our report dated March 6, 2017 expressed an unqualified opinion on those consolidated financial statements and financial statement schedule.

/s/ Moss Adams LLP

Seattle, Washington

March 6, 2017

ITEM 9B. OTHER INFORMATION

None.

PART III.**ITEM 10. DIRECTORS, EXECUTIVE OFFICERS AND CORPORATE GOVERNANCE**

Information regarding executive officers is included in Part I of this Annual Report on Form 10-K in Item 4A. The information required by this Item 10 of Form 10-K and not provided in Item 4A will be included under the caption "Discussion of Proposals Recommended by the Board" in our 2017 Proxy Statement and is incorporated herein by reference. Our 2017 Proxy Statement will be filed with the SEC prior to our 2017 Annual Meeting of Shareholders.

ITEM 11. EXECUTIVE COMPENSATION

The information required by this Item 11 of Form 10-K will be included under the captions "Executive Compensation," "Compensation Committee Interlocks and Insider Participation," and "Director Compensation for 2016" in our 2017 Proxy Statement and are incorporated herein by reference.

ITEM 12. SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT AND RELATED STOCKHOLDER MATTERS

Information as of December 31, 2016, regarding equity compensation plans approved and not approved by shareholders is summarized in the following table (in thousands, except per share data):

Plan Category	Equity Compensation Plan Information		
	Number of securities to be issued upon exercise of outstanding options, warrants and rights (a)	Weighted-average exercise price of outstanding options, warrants and rights (b)	Number of securities remaining available for further issuance under equity compensation plans (excluding securities reflected in column (a)) (c)
Equity compensation plans approved by shareholders	4,003	\$ 3.94	1,988
Equity compensation plans not approved by shareholders	-	-	-
Total	<u>4,003</u>		<u>1,988</u>

The other information required by this Item 12 of Form 10-K will be included under the caption "Information about MicroVision Common Stock Ownership" in our 2017 Proxy Statement and is incorporated herein by reference.

ITEM 13. CERTAIN RELATIONSHIPS AND RELATED TRANSACTIONS AND DIRECTOR INDEPENDENCE

The information required by this Item 13 of Form 10-K will be included under the captions "Certain Relationships and Related Transactions" and "Board Meetings and Committees" in our 2017 Proxy Statement and are incorporated herein by reference.

ITEM 14. PRINCIPAL ACCOUNTING FEES AND SERVICES

The information required by this Item 14 of Form 10-K will be included under the caption "Independent Registered Public Accounting Firm" in our 2017 Proxy Statement and is incorporated herein by reference.

PART IV.

ITEM 15. EXHIBITS, FINANCIAL STATEMENT SCHEDULES

(A) Documents filed as part of this Annual Report on Form 10-K:

1. Consolidated Financial Statements

- Report of Independent Registered Public Accounting Firm
- Consolidated Balance Sheets as of December 31, 2016 and 2015
- Consolidated Statements of Operations for the years ended December 31, 2016, 2015 and 2014
- Consolidated Statements of Shareholders' Equity (Deficit) for the years ended December 31, 2016, 2015 and 2014
- Consolidated Statements of Cash Flows for the years ended December 31, 2016, 2015 and 2014
- Notes to Consolidated Financial Statements

2. Financial Statement Schedules

Schedule II

MicroVision, Inc.

**CERTIFICATION PURSUANT TO
RULE 13a-14(a) OF THE SECURITIES EXCHANGE ACT OF 1934,
AS ADOPTED PURSUANT TO
SECTION 302 OF THE SARBANES-OXLEY ACT OF 2002**

I, Alexander Y. Tokman, certify that:

1. I have reviewed this annual report on Form 10-K for the period ended December 31, 2016 of MicroVision, Inc.;
2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;
4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:
 - (a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
 - (b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
 - (c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
 - (d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and
5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):
 - (a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and
 - (b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.
