#### MICROVISION, INC. Notes to Consolidated Financial Statements June 30, 2003

#### Management's Statement

The Consolidated Balance Sheet as of June 30, 2003, the Consolidated Statements of Operations and Comprehensive Loss for the three and six months ended June 30, 2003 and June 30, 2002, and the Consolidated Statement of Cash Flows for the six months ended June 30, 2003 and June 30, 2002, have been prepared by Microvision, Inc. (the "Company") and have not been audited. In the opinion of management, all adjustments necessary to present fairly the financial position at June 30, 2003 and the results of operations and cash flows for all periods presented have been made and consist of normal recurring adjustments. Certain information and footnote disclosures normally included in financial statements prepared in accordance with generally accepted accounting principles have been condensed or omitted pursuant to the rules of the SEC. You should read these condensed financial statements in conjunction with the financial statements and notes thereto included in the Company's Annual Report on Form 10-K for the fiscal year ended December 31, 2002. The results of operations for the three and six months ended June 30, 2003 are not necessarily indicative of the operating results that may be attained for the entire fiscal year.

#### Principles of Consolidation

The consolidated financial statements include the accounts of Microvision, Inc. and Lumera Corporation ("Lumera"). As of June 30, 2003 and December 31, 2002, Microvision owned 76% of the outstanding common stock and 11% of the mandatorily redeemable convertible preferred stock of Lumera. The balance of Lumera's outstanding capital stock is owned by its directors, Microvision employees, the University of Washington ("UW") and other investors unaffiliated with the Company. Lumera's losses were first allocated to its common shareholders until such losses exceeded its common equity and then to its preferred shareholders pro rata in accordance with their respective ownership interests. All material intercompany accounts and transactions have been eliminated in consolidation.

#### Inventory

Inventory at June 30, 2003 and December 31, 2002 consisted of the following:

			June 30, 2003	December 31, 2002
Raw materials		5	154,000	\$ 456,000
Work in process			_	92,000
Finished goods			296,000	199,000
			450,000	\$ 747,000
		·		
	8	2		

The inventory at June 30, 2003 consisted of raw material and finished goods for Nomad and Flic. The inventory at December 31, 2002 consisted primarily of raw materials, work in process and finished goods for Nomad. Inventory is stated at the lower of cost or market, with cost determined on a weighted average basis. Management periodically assesses the need to provide for obsolescence of inventory and adjusts the carrying value of inventory to its net realizable value when required. During the six months ended June 30, 2003, the Company recorded a write down of Nomad inventory of approximately \$450,000.

#### Receivables from Related Parties

The Board of Directors authorized the Company to provide unsecured lines of credit to each of the Company's four senior officers. The limit of each line of credit is three

times the respective executive's base salary less any amounts outstanding under the Company's Executive Option Exercise Note Plan. In October 2001 and July 2002, the Board of Directors authorized an additional \$500,000 and \$200,000, respectively, to the limit for one of the senior officers. No additional loans have been made under either the Company's Executive Option Exercise Note Plan or the Executive Loan Plan since July 2002.

The Company establishes an allowance for doubtful accounts when it determines that a borrower may have insufficient net worth and short-term earnings potential to repay the outstanding balance under the Company-sponsored lines of credit. The Company recorded an additional allowance for doubtful accounts for the receivables from related parties of \$200,000 for the six months ended June 30, 2003. The balance of the allowance for doubtful accounts for receivables from related parties was \$900,000 at June 30, 2003. The Company has no plans to forgive any portion of the principal of the outstanding receivable balance.

#### San Mateo Closure

In May 2003, Microvision closed its research and development facility in San Mateo, California and consolidated its research and development activities in Bothell, Washington. Research and development expense for the three months ended June 30, 2003 includes \$370,000 for the closing of the Company's approximately 5,000 square foot facility in San Mateo and \$275,000 for severance or relocation of 11 employees. The Company paid \$100,000 in severance cost during the second quarter of 2003.

#### Net Loss Per Share

Basic net loss per share is calculated on the basis of the weighted-average number of common shares outstanding during the reporting periods. Diluted net loss per share is calculated on the basis of the weighted-average number of common shares outstanding and taking into account the dilutive effect of all potential common stock equivalents outstanding. Diluted net loss per share for the three and six month periods ended June 30, 2003 and 2002 is equal to basic net loss per share because the effect of potential common stock outstanding during the periods, including options and warrants, is anti-dilutive.

9

The components of basic and diluted earnings per share were as follows (in thousands except earnings per share data):

	Three months ended June 30,					Six month June	ed	
		2003	2	002	2003			2002
Numerator:								
Net loss available	\$	(6,692)	\$	(6,648)	\$	(14,088)	\$	(14,874)
Denominator:								
Basic and diluted weighted-average common shares outstanding		17,799		13,530	_	16,878	_	13,287
Basic and diluted net loss per share	\$	(.38)	\$	(.49)	\$	(.83)	\$	(1.12)

As of June 30, 2003 and 2002, the Company had outstanding options and warrants to purchase 6,317,000 and 6,200,000 shares of common stock, respectively. As of June 30, 2003 and 2002, Lumera had outstanding options and warrants to purchase 943,000 and 803,000 shares of common stock, respectively.

#### Stock Based Compensation

The Company accounts for stock-based employee compensation arrangements in accordance with the provisions of Accounting Principles Board Opinion ("APB") No. 25, "Accounting for Stock Issued to Employees" and related amendments and interpretations including FASB Interpretation Number ("FIN") 44, "Accounting for Certain Transactions Involving Stock Compensation," and complies with the disclosure provisions of Statement of Financial Accounting Standards ("SFAS") No. 123, "Accounting for Stock-Based Compensation." The Company accounts for equity instruments issued to non-employees in accordance with the provisions of SFAS No. 123 and Emerging Issues Task Force Issue No. 96-18.

In November 2002, the Company offered to exchange most of its outstanding options to purchase common stock for new options scheduled to be granted on or after June 11, 2003. All eligible options that were properly submitted for exchange were accepted and cancelled effective December 10, 2002. Employees tendered options to purchase an aggregate of 2,521,714 shares of the Company's common stock. On June 13, 2003, under the terms of this exchange program, the Company granted new options to purchase an aggregate of 1,732,000 shares of the Company's common stock. The exercise price of the new options is \$7.00 per share. The Company did not record a compensation charge as a result of the stock option exchange program.

10

Total non-cash stock option expense related to employee and director awards included in the determination of net loss was \$28,000 and \$69,000 for the three months ended June 30, 2003 and 2002, respectively, and \$73,000 and \$183,000 for the six months ended June 30, 2003 and 2002, respectively. Had compensation cost for employee and director options been determined using the fair values at the grant dates consistent with the methodology prescribed under SFAS 123, the Company's consolidated net loss available to common shareholders and associated net loss per share would have increased to the pro forma amounts indicated below (in thousands):

			Three Mon June	led	Six Months Ended June 30				
			2003		2002	2003			2002
Net Loss available for

	11010111110	Ψ	(.77)	Ψ	(.02)	Ψ	(1.17)	Ψ	(1.00)

#### Equity

In March 2003, the Company raised \$12,560,000, before issuance costs of \$970,000, from the sale of 2,644,000 shares of common stock and warrants to purchase 529,000 shares of common stock at an exercise price of \$6.50 per share. Each share of common stock and accompanying partial warrant was sold for \$4.75. The warrants are first exercisable in September 2003 and expire in March 2008.

#### Segment Information

The Company is organized into two segments - Microvision, which is engaged in the development and commercialization of scanned beam technology for information displays and image capture products, and Lumera, which is engaged in the development and commercialization of optical systems components technology. The segments were determined based on how management views and evaluates the Company's operations.

The following table reflects the results of the Company's reportable segments under the Company's financial management system. The performance of each segment is measured based on several metrics. These results are used, in part, by management in evaluating the performance of, and in allocation of resources to, each of the segments.

#### New Accounting Pronouncements

In November 2002, the Emerging Issues Task Force ("EITF") reached consensus on EITF No. 00-21, "Accounting for Revenue Arrangements with Multiple Deliverables." This consensus requires that revenue arrangements with multiple deliverables be divided into separate units of accounting if the deliverables in the arrangement meet specific criteria. In addition, arrangement consideration must be allocated among the separate units of accounting if the deliverables in the arrangement meet specific criteria. In addition, arrangement consideration must be allocated among the separate units of accounting based on their relative fair values, with certain limitations. The Company will be required to adopt the provisions of this consensus for revenue arrangements entered into after June 30, 2003, and has decided to apply it on a prospective basis. Based on the nature of the Company's current revenue-generating activities, the Company does not expect the adoption of EITF No. 00-21 to have a material impact on its results of operations, financial position, or cash flows.

13

#### ITEM 2 MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

#### Forward-Looking Statements

The information set forth in this report in Item 2, "Management's Discussion and Analysis of Financial Condition and Results of Operations," and Item 3, "Quantitative and Qualitative Disclosure about Market Risk," includes "forward-looking statements" within the meaning of Section 21E of the Securities Exchange Act of 1934, as amended

(the "Exchange Act"), and is subject to the safe harbor created by that section. Such statements may include, but are not limited to, projections of revenues, income or loss, capital expenditures, plans for product development and cooperative arrangements, future operations, financing needs or plans of the Company, as well as assumptions relating to the foregoing. The words "believe," "expect," "will," "anticipate," "estimate," "project," "plan," and similar expressions identify forward-looking statements, which speak only as of the date the statement was made. Factors that could cause results to differ materially from those projected or implied in the forward-looking statements are set forth below under the caption "Risk Factors Relating to the Company's Business."

#### Overview

Microvision, Inc. ("Microvision" or the "Company") designs and markets information display and capture products and component technologies. The Company is developing and seeks to commercialize technologies and products in two business segments relating to the display, capture and transmission of information:

- · Microvision Segment Develops and commercializes the scanned beam technology for information displays and image capture products.
- Lumera Segment Develops and commercializes a new class of organic non-linear chromophore materials, which can be used to change the properties of light waves used to transmit information.

#### Microvision Segment

#### Scanned Beam Displays

The Company is marketing the Nomad™ Augmented Vision System, a see-through monochrome head-worn display product that the Company introduced in 2001. The Company has also developed prototype scanned beam displays, including hand-held and head-worn color versions, and is currently refining and further developing its scanned beam display technology for defense, aerospace, industrial, medical and consumer applications. The Company believes the scanned beam display technology may be useful in a variety of applications, including entertainment and consumer displays, mobile communications and computing and visual simulation applications that require images to be superimposed onto the user's view of the external environment. The Company expects that, in contrast to display solutions that use non-scanning technologies, its

14

scanned beam display technology will enable the production of high quality displays that are small, lightweight and low power, and that can be held or worn comfortably.

The Company's scanned beam technology includes proprietary technology developed by the Company, technology licensed from other companies and the Virtual Retinal Display TM technology licensed from the University of Washington.

Image Capture Devices

In September 2002, the Company introduced its Flic<sup>TM</sup> Laser Bar Code Scanner, a hand-held bar code scanner that uses proprietary scanning technology developed by the Company. The Company believes that the basic scanning components of the scanned beam display technology may also be used to develop products, such as bar code scanners and miniature high-resolution laser cameras that may have higher performance and lower cost than those currently available.

#### Lumera Segment

#### Electro-Optical Polymer Materials and Devices

In 2000, the Company formed a subsidiary company, Lumera Corporation ("Lumera"). Lumera is developing and commercializing a new class of electro-optic materials and devices that utilize proprietary polymer compounds and processing technologies. Lumera believes that these materials may improve performance and reduce the costs of electro-optic components used in fiber-optic telecommunications and data communications systems, phased array antenna systems, optical computing, optical signal processing and optical interconnects. These materials may also be used in additional applications such as organic light emitting diode displays and other coating materials.

Lumera has completed sample prototypes for a 10GHz electro-optic modulator for the telecommunications industry and in February 2003 announced the demonstration of a new polymer-based radio frequency phase shifter. Lumera believes that, for some combinations of phase shift, drive voltage, power handling and speed, it can produce phase shifting devices at lower costs than competiting alternatives.

Lumera's primary source of revenue to date has been from U.S. Government contracts for materials development.

#### Plan of Operation

The Company initially plans to sell Nomad to customers in general aviation, automotive, industrial, medical and defense sectors. The Company plans to sell Nomad directly to end-users and through value added resellers who will develop applications using Nomad and through original equipment manufacturers. In July 2003, the Company announced plans to introduce a next generation Nomad system in late 2003.

The Company introduced Flic, a hand-held bar code scanner, in September 2002. Flic is produced by a contract manufacturer. The Company plans to distribute Flic through the same channels as existing bar code products including resellers and original equipment manufacturers. The Company is also planning to introduce a wireless version of the Flic bar code scanner in September 2003.

Lumera's polymer materials and processing technology may ultimately be sold in a variety of forms, including coated wafers, non-packaged discrete devices, non-packaged integrated devices, packaged discrete components, packaged integrated components, and intellectual property in the form of licenses, integrated cells and other forms. Lumera's target customers include strategic

15

technology partners, sub-system manufacturers, private label component vendors, component distributors and systems manufacturers in the telecommunications industry.

The Company also intends to continue entering into strategic relationships with systems integrators and original equipment manufacturers to pursue the development of commercial products incorporating the Company's technologies. The Company is currenty working with Canon, Johnson & Johnson's Ethicon Endo Surgery subsidiary, BMW and Volkswagon of America to further develop potential products.

In addition, the Company plans to continue to pursue, obtain and perform on development contracts. The Company expects that such contracts will further the development of the scanned beam technology and polymer technologies and lead to additional commercial applications of its technologies. The Company also plans to invest funds for ongoing innovation and improvements to the scanned beam technology and polymer technologies. These innovations and improvements include developing component technology, building additional prototypes, and designing components and products for manufacturability. The Company intends to continue hiring qualified sales, technical and other personnel and to continue investing in laboratory facilities and equipment to achieve development and production objectives.

Results of Operations

### THREE MONTHS ENDED JUNE 30, 2003 COMPARED TO THREE MONTHS ENDED JUNE 30, 2002

Revenue. The Company earns revenue from performance on development contracts, and sales of Nomad and Flic. Revenue in the three months ended June 30, 2003 decreased by approximately \$200,000, or 5%, to \$4.5 million from \$4.7 million in the same period in 2002. For the three months ended June 30, 2003, 60% of revenue was derived from performance on development contracts with the United States government, 36% from performance on development contracts with commercial customers and the remainder from sales of Nomad and Flic units. For the three months ended June 30, 2002, 78% of revenue was derived from performance on development contracts with the United States government, 18% from performance on development contracts with commercial customers and the remainder from the sale of Nomad units.

The backlog of development contracts at June 30, 2003 was \$3.4 million, all of which is scheduled for completion during the next twelve months.

During the three months ended June 30, 2003 the Company entered into the following material development contracts:

- In April 2003, the Company entered into a \$2.2 million contract modification with the U.S. Army's Aviation Applied Technology Directorate to continue work on an advanced helmet-mounted display and imaging system to be used in the Virtual Cockpit Optimization Program.
- In April 2003, the Company entered into a \$1.6 million contract modification with the U.S. Army's Medical Research Acquisition Activities, Telemedicine and Advanced

16

Technology Research Center to continue development of a mobile wireless personal display system for medical applications.

In May 2003, the Company entered into a \$900,000 commercial contract to develop prototype displays for automotive applications.

Cost of Revenue. Cost of revenue includes both the direct and allocated indirect costs of performing on development contracts and the Nomad and Flic product costs. Direct costs include labor, materials and other costs incurred directly in performing on a contract. Indirect costs include labor and other costs associated with operating the Company's research and development departments and building the technical capabilities and capacity of the Company. Cost of revenue is determined both by the level of direct costs incurred on development contracts and by the level of indirect costs incurred in managing and building the technical capabilities and capacity of the Company. The cost of revenue can fluctuate substantially from period to period depending on the level of both the direct costs incurred in the performance of projects and the level of indirect costs incurred.

Cost of revenue for both the three months ended June 30, 2003 and June 30, 2002 was \$2.2 million. Total direct costs for the three months ended June 30, 2003 decreased by approximately 15% from the same period in 2002. The direct labor component of direct costs for the three months ended June 30, 2003 increased by approximately 10% over the same period in 2002. The increase in direct cost is a result of the change in the cost structure of contract work performed during the three months end June 30, 2003 from the same period in 2002.

Research and development overhead is allocated to both cost of revenue and research and development expense based on the proportion of direct labor cost incurred in cost of revenue and research and development, respectively. As a result of the higher direct labor cost in cost of revenue and a higher overhead rate for the three months ended June 30, 2003 approximately 25% more overhead was allocated to cost of revenue than in the same period in 2002.

The Company's costs to produce Nomad units during the three months ended June 30, 2003 were substantially higher than Nomad revenue. The Company has classified production cost in excess of product revenue as research and development expense. The Company does not expect Nomad production and the design and manufacturing processes to become sufficiently mature to support "commercial production" as described in SFAS No. 2 "Accounting for Research and Development Costs" during 2003.

The Company expects that cost of revenue on an absolute dollar basis will increase in the future. This increase will likely result from planned sales of commercial products and additional development contract work that the Company expects to perform. The cost of revenue as a percentage of revenue can fluctuate significantly from period to period, depending on the contract and product mix, the cost of future products and the levels of direct and indirect costs incurred. The Company expects the cost of contract revenue, as a percentage of contract revenue, to remain relatively flat over time.

17

Research and Development Expense. Research and development expense consists of:

- · Compensation related costs of employees and contractors engaged in internal research and product development activities,
- Research fees paid to the University of Washington under Sponsored Research Agreement,
- Laboratory operations, outsourced development and processing work,
- Fees and expenses related to patent applications, prosecution and protection,
- · Related operating expenses, and
- Nomad production cost in excess of Nomad revenue.

Included in research and development expenses are costs incurred in acquiring and maintaining licenses of technology from other companies and universities.

Research and development expense in the three months ended June 30, 2003 increased by approximately \$100,000, or 2%, to \$6.1 million from \$6.0 million in the same period in 2002.

In May 2003, Microvision closed its research and development facility in San Mateo, California and consolidated its research and development activities in Bothell, Washington. Research and development expense for the three months ended June 30, 2003 includes \$370,000 for the closing of the Company's approximately 5,000 square foot facility in San Mateo and \$275,000 for severance or relocation of 11 employees. The Company paid \$100,000 in severance costs during the second quarter of 2003.

The Company believes that a substantial level of continuing research and development expense will be required to develop additional commercial products using the scanned beam display technology and the polymer materials technology. Accordingly, the Company anticipates its level of research and development spending will continue to be significant. These expenses could be incurred as a result of:

- · Subcontracting work to development partners,
- · Expanding and equipping in-house laboratories,
- · Acquiring rights to additional technologies,

- · Incurring related operating expenses, and
- Hiring additional technical and support personnel.

The Company expects that the amount of spending on research and product development will remain high in future quarters as the Company:

• Continues development and commercialization of the Company's scanned beam technology,

18

- Develops and commercializes the polymer materials technology,
- Accelerates development of microdisplays and imaging products to meet emerging market opportunities, and
- Pursues other potential business opportunities.

Marketing, General and Administrative Expense. Marketing, general and administrative expenses include compensation and support costs for sales, marketing, management and administrative staff, and for other general and administrative costs, including legal and accounting services, consultants and other operating expenses.

The Company's marketing activities include corporate and product awareness campaigns, such as website development and participation at trade shows; corporate communications initiatives; and work with potential customers and joint venture partners to identify and evaluate product applications in which the Company's technology could be integrated or otherwise used.

Marketing, general and administrative expenses in the three months ended June 30, 2003 were unchanged from the same period in 2002 at \$4.4 million. The Company did not experience increases in marketing, general and administrative expenses in part as a result of the Company's efforts to control costs. The Company expects marketing, general and administrative expenses to increase, commensurate with increases in revenue, in future periods as the Company:

- · Adds to its sales and marketing staff,
- · Makes additional investments in sales and marketing activities, and
- Increases the level of corporate and administrative activity.

Non-Cash Compensation Expense. Non-cash compensation expense in the three months ended June 30, 2003 increased \$54,000, or 14%, to \$452,000 from \$398,000 in the same period in 2002.

The following table shows the major components of non-cash compensation expense for the three months ended June 30, 2003 and 2002, respectively.

	i ii ee montus ended			
	June 30,			
	2003 2002			2002
Lumera stock issued to the University of Washington	\$	251,000	\$	251,000
Microvision and Lumera stock options issued to consultants		173,000		78,000
Microvision and Lumera stock options issued to employees		28,000		44,000
Microvision Stock and options issued to Independent Directors		_		25,000
	\$	452,000	\$	398,000

At June 30, 2003, the Company had \$1.7 million of unamortized non-cash compensation expense that will be amortized over the next three years.

19

Interest Income and Expense. Interest income in the three months ended June 30, 2003 decreased by \$190,000, or 68%, to \$91,000 from \$281,000 in the same period in 2002. This decrease resulted primarily from lower average cash and investment securities balances in the three months ended June 30, 2003 than the average cash and investment securities balances in the same period of the prior year.

Interest expense in the three months ended June 30, 2003 was consistent with the same period in 2002 as the Company's borrowings remained relatively constant.

SIX MONTHS ENDED JUNE 30, 2003 COMPARED TO SIX MONTHS ENDED JUNE 30, 2002

Revenue. Revenue in the six months ended June 30, 2003 decreased by approximately \$500,000, or 6%, to \$8.0 million from \$8.5 million in the same period in 2002. For the six months ended June 30, 2003, 52% of revenue was derived from performance on development contracts with the United States government, 45% from performance on development contracts with commercial customers and the remainder from sales of Nomad and Flic units. For the six months ended June 30, 2002, 85% of revenue was derived from performance on development contracts with commercial customers and the remainder from the sales of Nomad units.

Cost of Revenue. Cost of revenue for the six months ended June 30, 2003 decreased by approximately \$400,000, or 10%, to \$3.6 million from \$4.0 million in the same period in 2002. Total direct costs for the six months ended June 30, 2003 decreased by approximately 20% from the same period in 2002. The direct labor component of direct costs for the six months ended June 30, 2003 was unchanged from the same period in 2002. The decrease in direct costs was principally a result of the lower volume of work on revenue contracts during the six months ended June 30, 2003 compared to the same period in 2002.

Research and development overhead is allocated to both cost of revenue and research and development expense based on the proportion of direct labor cost incurred in cost of revenue and research and development, respectively. As a result of a higher overhead rate for the six months ended June 30, 2003, approximately 5% more overhead was allocated to cost of revenue than in the same period in 2002.

The Company's costs to produce Nomad units during the six months ended June 30, 2003 were substantially higher than product revenue. The Company has classified production cost in excess of product revenue as research and development expense. The Company does not expect Nomad production and the design and manufacturing processes to become sufficiently mature to support "commercial production" as described in SFAS No. 2 "Accounting for Research and Development Costs" in 2003.

Management periodically assesses the need to provide for obsolescence of inventory and adjusts the carrying value of inventory to its net realizable value when required. During the six months

ended June 30, 2003, the Company recorded a write down of Nomad inventory of approximately \$450,000.

Research and Development Expense. Research and development expense in the six months ended June 30, 2003 decreased by approximately \$400,000, or 3%, to \$12.9 million from \$13.3 million in the same period in 2002. During the six month period ending June 30, 2002 the Company recorded \$1.4 million in expense related to light source development performed for the Company by Cree, Inc. The Company's development agreement with Cree ended in April 2002, resulting in a \$1.4 million expense reduction in the six months ended June 30, 2003 from the same period in 2002.

In May 2003, Microvision closed its research and development facility in San Mateo, California and consolidated its research and development activities in Bothell, Washington. Research and development expense for the three months ended June 30, 2003 includes \$370,000 for the closing of the Company's approximately 5,000 square foot facility in San Mateo and \$275,000 for severance or relocation of 11 employees. The Company paid \$100,000 in severance costs during the second quarter of 2003.

Marketing, General and Administrative Expense. Marketing, general and administrative expenses in the six months ended June 30, 2003 decreased by approximately \$200,000, or 2%, to \$8.7 million from \$8.9 million in the same period in 2002. The decrease is due in part to the company's effort to control cost.

The Board of Directors authorized the Company to provide unsecured lines of credit to each of the Company's four senior officers. The limit of each line of credit is three times the respective executive's base salary less any amounts outstanding under the Company's Executive Option Exercise Note Plan. In October 2001 and July 2002, the Board of Directors authorized an additional \$500,000 and \$200,000, respectively, to the limit for one of the senior officers. No additional loans have been made under either the Company's Executive Option Exercise Note Plan or the Executive Loan Plan since July 2002, and the Company does not intend to make any additional loans under these plans.

The Company establishes an allowance for doubtful accounts when it determines that a borrower may have insufficient net worth and short-term earnings potential to repay the outstanding balance under the Company-sponsored lines of credit. The Company recorded an additional allowance for doubtful accounts for the receivables from related parties of \$200,000 for the six months ended June 30, 2003. The balance of the allowance for doubtful accounts for receivables from related parties was \$900,000 at June 30, 2003. The Company has no plans to forgive any portion of the principal of the outstanding receivable balance.

Non-Cash Compensation Expense. Non-cash compensation expense in the six months ended June 30, 2003 of \$900,000 was comparable to the same period in 2002.

21

The following table shows the major components of non-cash compensation expense for the six months ended June 30, 2003 and 2002, respectively.

	\$	Six months ended		
		June 30,		
	2003	2003 2002		
Lumera stock issued to the University of Washington	\$ 50	2,000 \$	502,000	
Microvision and Lumera stock options issued to consultants	34	2,000	228,000	
Microvision and Lumera stock options issued to employees	7	3,000	125,000	
Microvision Stock and options issued to Independent Directors		_	58,000	
	\$ 91	7,000 \$	913,000	
	Ψ ,,,	7,000 \$	715,000	

Interest Income and Expense. Interest income in the six months ended June 30, 2003 decreased by \$405,000, or 65%, to \$214,000 from \$619,000 in the same period in 2002. This decrease resulted primarily from lower average cash and investment securities balances in the six months ended June 30, 2003 than the average cash and investment securities balances in the same period of the prior year.

Interest expense in the six months ended June 30, 2003 was consistent with the same period in 2002 as the Company's borrowings remained relatively constant.

Liquidity and Capital Resources

The Company has funded operations to date primarily through the sale of common stock, convertible preferred stock, warrants and, to a lesser extent, from development contract revenues and product sales. At June 30, 2003, the Company had \$11.8 million in cash, cash equivalents and investment securities.

Cash used in operating activities totaled \$14.4 million during the six months ended June 30, 2003, compared to \$15.1 million during the same period in 2002. Cash used in operating activities for each period resulted primarily from the net loss for the period.

Cash provided by investing activities totaled \$2.2 million during the six months ended June 30, 2003, compared to \$4.8 million during the same period of 2002. During the six months ended June 30, 2003, the Company had net sales of investment securities of \$2.8 million compared to \$5.8 million during the same period in 2002. The proceeds from the sales of investment securities were used to fund the Company's operations.

The Company used cash of \$628,000 for capital expenditures during the six months ended June 30, 2003, compared to \$650,000 during the same period in 2002. Capital expenditures include

22

leasehold improvements to leased office space and computer hardware and software, laboratory equipment and furniture and fixtures to support growth. The Company plans to spend approximately \$1.2 million during the remainder of 2003 for production equipment for Flic and Nomad.

Cash provided by financing activities totaled \$11.5 million during the six months ended June 30, 2003, compared to \$5.8 million during the same period in 2002.

In March 2003, the Company raised \$12.6 million, before issuance costs of \$970,000, from the sale of 2,644,000 shares of common stock and warrants to purchase 529,000 shares of common stock at an exercise price of \$6.50 per share. Each share of common stock and accompanying partial warrant was sold for \$4.75. The warrants are first exercisable in September 2003 and expire in March 2008.

Future operating expenditures and capital requirements will depend on numerous factors, including the following:

- The progress of research and development programs,
- The progress in commercialization activities and arrangements,
- · The cost of filing, prosecuting, defending and enforcing any patent claims and other intellectual property rights,

- · Competing technological and market developments, and
- The Company's ability to establish cooperative development, joint venture and licensing arrangements.

Microvision and Lumera maintain separate cash and investment accounts. Each company's cash and investments are generally used to fund its own business activities.

The Company believes that Microvision's cash, cash equivalent and investment securities balances as of June 30, 2003 totaling \$10.7 million will satisfy its budgeted cash requirements, including its planned investment in Lumera, through December 2003 based on Microvision's current operating plan.

Lumera expects to complete a private placement of approximately \$1.7 million of preferred stock shortly. The Company believes that Lumera's cash, cash equivalent and investment securities balances totaling \$1.1 million as of June 30, 2003, together with the \$1.7 million expected to be raised, will satisfy Lumera's current budgeted cash requirements through October 2003. Microvision expects to participate in the amount of approximately \$870,000 and maintain a majority ownership in Lumera following the close of the financing. Microvision is not contractually obligated to provide additional funding to Lumera. In addition, Lumera is continuing to seek additional financing to fund operations beyond October 2003. There can be no assurance that the private placement will be consummated or that Lumera will obtain additional financing.

As part of its efforts to reduce current cash requirements, Lumera and the University of Washington entered into an amendment to the sponsored research agreement in March 2003, which deferred certain 2003 payments until April 1, 2004. Under the amended agreement Lumera's required payments during 2003 are \$2.9 million as a result of a late payment which accelerated \$750,000 which was otherwise payable in 2004. Lumera currently owes the University of Washington \$1,600,000 under the sponsored research agreement, which payment must be made by September 30, 2003 or Lumera could lose its use of the licensed technology. Lumera is currently negotiating with the University of Washington and expects to either enter into a revised agreement or to make the payment to the University of Washington by September 30, 2003. There can be no assurance that Lumera will make the payment or enter a revised agreement.

23

Microvision is not contractually obligated to provide additional funding to Lumera.

Microvision's and Lumera's capital requirements will depend on many factors, including, with respect to Microvision, the rate at which Microvision can directly, or through arrangements with original equipment manufacturers, introduce additional products incorporating the scanned beam technology and the market acceptance and competitive position of such products and with respect to Lumera, the rate at which Lumera can directly or through arrangements with original equipment manufacturers, introduce products incorporating the polymer materials technology and the market acceptance and competitive position of such products. Should expenses of Microvision or Lumera exceed the amounts budgeted, both or either of them may require additional capital to continue to fund their operations and implement their business plans. There can be no assurance that additional financing will be available to either Microvision or Lumera or that, if available, it will be available on terms acceptable to them on a timely basis. If adequate funds are not available to satisfy either short-term or long-term capital requirements or planned revenues are not generated, either or both of them may be required to limit their operations substantially. This limitation of operations may include reduction in capital expenditures, deferral of salary increases and reductions in staff and discretionary costs, which may include non-contractual Microvision and Lumera research costs.

New Accounting Pronouncements

In November 2002, the Emerging Issues Task Force ("EITF") reached consensus on EITF No. 00-21, "Accounting for Revenue Arrangements with Multiple Deliverables." This consensus requires that revenue arrangements with multiple deliverables be divided into separate units of accounting if the deliverables in the arrangement meet specific criteria. In addition, arrangement consideration must be allocated among the separate units of accounting if the deliverables in the arrangement meet specific criteria. In addition, arrangement consideration must be allocated among the separate units of accounting based on their relative fair values, with certain limitations. The Company will be required to adopt the provisions of this consensus for revenue arrangements entered into after June 30, 2003, and has decided to apply it on a prospective basis. Based on the nature of the Company's current revenue-generating activities, the Company does not expect the adoption of EITF No. 00-21 to have a material impact on its results of operations, financial position, or eash flows.

24

#### Risk Factors Relating to the Company's Business

#### We have a history of operating losses and expect to incur significant losses in the future.

We have had substantial losses since our inception and we anticipate an operating loss at least through the year ending December 31, 2003. We cannot assure you that we will ever become or remain profitable.

- As of June 30, 2003, we had an accumulated deficit of \$142.2 million.
- We incurred net losses of \$66.1 million from inception through 2000, \$34.8 million in 2001, \$27.2 million in 2002, and \$14.1 million in the six months ended June 30, 2003

The likelihood of our success must be considered in light of the expenses, difficulties and delays frequently encountered by companies formed to develop and market new technologies. In particular, our operations to date have focused primarily on research and development of the scanned beam technology and development of demonstration units. We introduced our first two commercial products during 2002. We are unable to accurately estimate future revenues and operating expenses based upon historical performance.

We cannot be certain that we will succeed in obtaining additional development contracts or that we will be able to obtain customer orders for our products. In light of these factors, we expect to continue to incur substantial losses and negative cash flow at least through 2003 and likely thereafter. We cannot be certain that we will achieve positive cash flow at any time in the future.

We will require additional capital to continue to fund our operations and to implement our business plan. If we do not obtain additional capital, we may be required to limit our operations substantially. Raising additional capital may dilute the value of current shareholders' shares.

Based on our current operating plan we believe that we can fund our operations through December 2003. Wewill require additional capital to continue to fund our operations, including to:

- · Further develop the scanned beam and polymer materials technologies,
- Add manufacturing capacity,
- · Develop and protect our intellectual property rights, and
- Fund long-term business development opportunities.

If revenues are less than we anticipate or if expenses exceed the amounts budgeted, we also may require additional capital earlier to further the development of our technologies, for expenses associated with product development, and to respond to competitive pressures or to meet unanticipated development difficulties. In addition, our operating plan provides for the development of strategic relationships with systems and equipment manufacturers that may

25

require additional investments by us. Additional financing may not be available to us or, if available, may not be available on terms acceptable to us on a timely basis. If adequate funds are not available to satisfy either short-term or long-term capital requirements, we may be required to limit our operations substantially. Our capital requirements will depend on many factors, including, but not limited to, the rate at which we can, directly or through arrangements with original equipment manufacturers, introduce products incorporating the scanned beam technology and the market acceptance and competitive position of such products. Raising additional capital may involve issuing securities with rights and preferences that are senior to our common stock and may dilute the value of current shareholders' shares.

We cannot be certain that the scanned beam technology or products incorporating this technology will achieve market acceptance. If the scanned beam technology does not achieve market acceptance, our revenues may not grow.

Our success will depend in part on customer acceptance of the scanned beam technology. The scanned beam technology may not be accepted by manufacturers who use display technologies in their products, by systems integrators who incorporate our products into their products or by consumers of these products. To be accepted, the scanned beam technology must meet the expectations of our potential customers in the defense, industrial, medical and consumer markets. If our technology fails to achieve market acceptance, we may not be able to continue to develop the scanned beam technology.

#### It may become more difficult to sell our stock in the public market.

Our common stock is listed for quotation on the Nasdaq National Market. To keep our listing on this market, we must meet Nasdaq's listing maintenance standards. If the bid price of our common stock falls below \$1.00 for an extended period, or we are unable to continue to meet Nasdaq's listing maintenance standards for any other reason, our common stock could be delisted from the Nasdaq National Market. If our common stock were delisted, we likely would seek to list the common stock on the Nasdaq SmallCap Market, the American Stock Exchange or on a regional stock exchange. Listing on such other market or exchange could reduce the liquidity for our common stock. If our common stock were not listed on the SmallCap Market or an exchange, trading of our common stock would be conducted in the over-the-counter market on an electronic bulletin board established for unlisted securities or directly through market makers in our common stock. If our common stock were to trade in the over-the-counter market, an investor would find it more difficult to dispose of, or to obtain accurate quotations for the price of, the common stock. A delisting from the Nasdaq National Market and failure to obtain listing on such other market or exchange would subject our securities to so-called penny stock rules that impose additional sales practice and market-making requirements on broker-dealers who sell or make a market in such securities. Consequently, removal from the Nasdaq National Market and failure to obtain listing on another market or exchange could affect the ability or willingness of broker-dealers to sell or make a market in our common stock is less than \$5.00 per share, we become subject to penny stock rules even if our common stock is still listed on the Nasdaq National Market. While the penny stock rules

26

should not affect the quotation of our common stock on the Nasdaq National Market, these rules may further limit the market liquidity of our common stock and the ability of investors to sell our common stock in the secondary market. During the second, third and fourth quarters of 2002 and the first and second quarter of 2003 the market price of our stock traded below \$5.00 per share.

#### Our lack of the financial and technical resources relative to our competitors may limit our revenues, potential profits and overall market share.

Our current products and potential future products will compete with established manufacturers of existing products and companies developing new technologies. Many of our competitors have substantially greater financial, technical and other resources than us. Because of their greater resources, our competitors may develop products or technologies that are superior to our own. The introduction of superior competing products or technologies could result in reduced revenues, lower margins or loss of market share, any of which could reduce the value of our business.

#### We may not be able to keep up with rapid technological change and our financial results may suffer.

The information display industry and the optical switching industry have been characterized by rapidly changing technology, accelerated product obsolescence and continuously evolving industry standards. Our success will depend upon our ability to further develop the scanned beam and the polymer materials technologies and to cost effectively introduce new products and features in a timely manner to meet evolving customer requirements and compete with competitors' product advances. We may not succeed in these efforts because of:

- delays in product development,
- · lack of market acceptance for our products, or
- · lack of funds to invest in product development and marketing.

The occurrence of any of the above factors could result in decreased revenues and market share.

We could face lawsuits related to our use of the scanned beam technology or other technologies. Defending these suits would be costly and time consuming. An adverse outcome in any such matter could limit our ability to commercialize our technology and products, reduce our revenues and increase our operating expenses.

We are aware of several patents held by third parties that relate to certain aspects of scanned beam displays and image capture products. These patents could be used as a basis to challenge the validity, limit the scope or limit our ability to obtain additional or broader patent rights of our patents or patents we have licensed. A successful challenge to the validity of our patents or patents we have licensed could limit our ability to commercialize the scanned beam technology and other technologies and, consequently, materially reduce our revenues. Moreover, we cannot be certain that patent holders or other third parties will not claim infringement by us with respect to current and future technology. Because U.S. patent applications are held and examined in

27

secrecy, it is also possible that presently pending U.S. applications will eventually be issued with claims that will be infringed by our products or the scanned beam technology. The defense and prosecution of a patent suit would be costly and time consuming, even if the outcome were ultimately favorable to us. An adverse outcome in the defense of a patent suit could subject us to significant cost, to require others and us to cease selling products that incorporate scanned beam technology, to cease licensing scanned beam technology or to require disputed rights to be licensed from third parties. Such licenses, if available, would increase our operating expenses. Moreover, if

claims of infringement are asserted against our future co-development partners or customers, those partners or customers may seek indemnification from us for damages or expenses they incur.

#### Our planned future products are dependent on advances in technology by other companies.

We rely on and will continue to rely on technologies, such as light sources and optical components that are developed and produced by other companies. The commercial success of certain of our planned future products will depend in part on advances in these and other technologies by other companies. Due to the current business environment, many companies that are developing new technologies are reducing expenditures on research and development. This may delay the development and commercialization of components we would use to manufacture certain of our planned future products.

#### Our products may be subject to future health and safety regulations that could increase our development and production costs.

Products incorporating scanned beam display technology could become subject to new health and safety regulations that would reduce our ability to commercialize the scanned beam display technology. Compliance with any such new regulations would likely increase our cost to develop and produce products using the scanned beam display technology and adversely affect our financial results.

#### If we cannot manufacture products at competitive prices, our financial results will be adversely affected.

To date, we have produced limited quantities of Nomad<sup>TM</sup> and Flic<sup>TM</sup>, and demonstration units for research, development and demonstration purposes. The cost per unit for these units currently exceeds the level at which we could expect to profitably sell these products. If we cannot lower our cost of production, we may face increased demands on our financial resources, possibly requiring additional equity and/or debt financing to sustain our business operations.

2.8

### Because we plan to continue using overseas contract manufacturers, our operating results could be harmed by economic, political, regulatory and other factors existing in foreign countries.

We currently use a contract manufacturer in Asia to manufacture Flic, and we plan to continue using overseas manufacturers to manufacture some of our products. These international operations are subject to inherent risks, which may adversely affect us, including:

- · political and economic instability;
- high levels of inflation, historically the case in a number of countries in Asia;
- · burdens and costs of compliance with a variety of foreign laws;
- foreign taxes; and
- changes in tariff rates or other trade and monetary policies.

#### If we experience delays or failures in developing commercially viable products, we may have lower revenues.

We began production of Nomad, our first commercial product, in December 2001. In September 2002, we introduced Flic, our second commercial product. In addition, we have developed demonstration units incorporating the scanned beam technology, and demonstration units have been built using the polymer materials technology. However, we must undertake additional research, development and testing before we are able to develop additional products for commercial sale. Product development delays by us or our potential product development partners, or the inability to enter into relationships with these partners, may delay or prevent us from introducing products for commercial sale.

#### If we cannot supply products in commercial quantities, we will not achieve commercial success.

We are developing our capability to manufacture products in commercial quantities. Our success depends in part on our ability to provide our components and future products in commercial quantities at competitive prices. Accordingly, we will be required to obtain access, through business partners or contract manufacturing capacity and processes for the commercial production of our expected future products. We cannot be certain that we will successfully obtain access to sufficient manufacturing resources. Future manufacturing limitations of our suppliers could result in a limitation on the number of products incorporating our technology that we are able to produce.

29

## If our licensors and we are unable to obtain effective intellectual property protection for our products and technology, we may be unable to compete with other companies.

Intellectual Property protection for our products is important and uncertain. If we do not obtain effective intellectual property protection for our products, processes and technology, we may be subject to increased competition. Our commercial success will likely depend in part on our ability and the ability of the University of Washington to maintain the proprietary nature of the scanned beam display and other key technologies by securing valid and enforceable patents and effectively maintaining unpatented technology as trade secrets. We try to protect our proprietary technology by seeking to obtain United States and foreign patents in our name, or licenses to third-party patents, related to proprietary technology, inventions, and improvements that may be important to the development of our business. However, our patent position and the patent position of the University of Washington involves complex legal and factual questions. The standards that the United States Patent and Trademark Office and its foreign counterparts use to grant patents are not always applied predictably or uniformly and can change. Additionally, the scope of patents are subject to interpretation by courts and their validity can be subject to challenges and defenses, including challenges and defenses based on the existence of prior art. Consequently, we cannot be certain as to the extent to which we will be able to obtain patents for our new products and technology or the extent to which the patents that we already own or license from others protect our products and technology. Reduction in scope of protection or invalidation of our licensed or owned patents, or our inability to obtain new patents, may enable other companies to develop products that compete with ours on the basis of the same or similar technology.

We also rely on the law of trade secrets to protect unpatented know-how and technology to maintain our competitive position. We try to protect this know-how and technology by limiting access to the trade secrets to those of our employees with a need to know such information and by entering into confidentiality agreements with parties that have access to it, such as our employees, consultants and business partners. Any of these parties could breach the agreements and disclose our trade secrets or confidential information, or our competitors might learn of the information in some other way. If any trade secret not protected by a patent were to be disclosed to or independently developed by a competitor, our competitive position could be materially harmed.

We could be exposed to significant product liability claims that could be time-consuming and costly, divert management attention and adversely affect our ability to obtain and maintain insurance coverage.

We may be subject to product liability claims if any of our product applications are alleged to be defective or cause harmful effects. For example, because our scanned beam displays are designed to scan a low power beam of colored light directly on the user's retina, the testing, manufacture, marketing and sale of these products involve an inherent risk that product liability claims will be asserted against us. Product liability claims or other claims related to our products, regardless of their outcome, could require us to spend significant time and money in

30

litigation, divert management time and attention, require us to pay significant damages, harm our reputation or hinder acceptance of our products. Any successful product liability claim may prevent us from obtaining adequate product liability insurance in the future on commercially desirable or reasonable terms. An inability to obtain sufficient insurance coverage at an acceptable cost or otherwise to protect against potential product liability claims could prevent or inhibit the commercialization of our products.

We rely heavily on a limited number of development contracts with the U.S. government, which are subject to immediate termination by the government for convenience at any time, and the termination of one or more of these contracts could have a material negative impact on our operations.

In 2002, 83% of our revenue was derived from performance on a limited number of development contracts with the U.S. government. For the three months and six months ended June 30, 2003, 60% and 52% of our revenue, respectively, was derived from performance on development contracts with the U.S. government. Therefore, any significant disruption or deterioration of our relationship with the U.S. government would significantly reduce our revenues. Our government programs must compete with programs managed by other contractors for limited amounts and uncertain levels of funding. The total amount and levels of funding are susceptible to significant fluctuations on a year-to-year basis. Our competitors continuously engage in efforts to expand their business relationships with the government and are likely to continue these efforts in the future. Our contracts with the government are subject to immediate termination by the government for convenience at any time. The government may choose to use contractors with competing display technologies or it may decide to discontinue any of our programs altogether. In addition, those development contracts that we do obtain require ongoing compliance with applicable government regulations. Termination of our development contracts, a shift in government spending to other programs in which we are not involved, a reduction in government spending generally, or our failure to meet applicable government regulations could have severe consequences for our results of operations.

#### Our products have long sales cycles, which make it difficult to plan our expenses and forecast our revenues.

We have a lengthy sales cycle that involves numerous steps including discussion of a product application, exploring the technical feasibility of a proposed product, evaluating the costs of manufacturing a product and manufacturing or contracting out the manufacturing of the product. Our long sales cycle, which can last several years, makes it difficult to predict the quarter in which sales will occur. Delays in sales could cause significant variability in our revenues and operating results for any particular quarterly period.

#### Our exploratory arrangements may not lead to products that will be profitable.

Our developmental contracts, including our relationships with parties such as the U.S. government, Canon, Johnson & Johnson, BMW and Volkswagon of America, are exploratory in nature and are intended to develop new types

31

of technology or applications. These efforts may prove unsuccessful, and these relationships may not result in the development of products that will be profitable.

#### Our revenues are highly sensitive to developments in the defense and aerospace industries.

Our revenues to date have been derived principally from product development research relating to defense applications of the scanned beam display technology. We believe that development programs and sales of potential products in this market will represent a significant portion of our future revenues. Developments that adversely affect the defense sector, including delays in government funding and a general economic downturn, could cause our revenues to decline substantially.

Our Virtual Retinal Display technology and polymer materials technology depend on our licenses from the University of Washington. If we lose our rights under the licenses themselves, our operations could suffer.

We have acquired the exclusive rights to the Virtual Retinal Display and polymer materials technology under two licenses from the University of Washington. These licenses expire upon expiration of the last of the University of Washington's patents that relate to this technology, which we currently anticipate will occur after 2011 and 2019, respectively. We could lose our exclusivity under these licenses if we fail to respond to an infringement action or fail to use our best efforts to commercialize the licensed technology. In addition, the University of Washington may terminate the licenses upon our breach and has the right to consent to all sublicense arrangements. If we were to lose our rights under the licenses, or if the University of Washington were to refuse to consent to future sublicenses, we would lose a competitive advantage in the market, and may even lose the ability to commercialize our products completely. Either of these results could substantially decrease our revenues.

#### We are dependent on third parties in order to develop, manufacture, sell and market our products.

Our strategy for commercializing the scanned beam technology and products incorporating the scanned beam technology includes entering into cooperative development, sales and marketing arrangements with corporate partners, original equipment manufacturers and other third parties. We cannot be certain that we will be able to negotiate arrangements on acceptable terms, if at all, or that these arrangements will be successful in yielding commercially viable products. If we cannot establish these arrangements, we would require additional capital to undertake such activities on our own and would require extensive manufacturing, sales and marketing expertise that we do not currently possess and that may be difficult to obtain. In addition, we could encounter significant delays in introducing the scanned beam technology or find that the development, manufacture or sale of products incorporating the scanned beam technology would not be feasible. To the extent that we enter into cooperative development, sales and marketing or other joint venture arrangements, our revenues will depend upon the efforts of third parties. We cannot be certain that any such arrangements will be successful.

32

#### Loss of any of our key personnel could have a negative effect on the operation of our business.

Our success depends on our executive officers and other key personnel and on the ability to attract and retain qualified new personnel. Achievement of our business objectives will require substantial additional expertise in the areas of sales and marketing, research and product development and manufacturing. Competition for qualified

personnel in these fields is intense, and the inability to attract and retain additional highly skilled personnel, or the loss of key personnel, could reduce our revenues and adversely affect our business.

Our quarterly performance may vary substantially and this variance, as well as general market conditions, may cause our stock price to fluctuate greatly and potentially expose us to litigation.

Our revenues to date have been generated from a limited number of development contracts with U.S. government entities and commercial partners. Our quarterly operating results may vary significantly based on:

- reductions or delays in funding of development programs involving new information display technologies by the U.S. government or our current or prospective commercial partners:
- changes in evaluations and recommendations by securities analysts following our stock or our industry generally;
- announcements by other companies in our industry;
- changes in business or regulatory conditions;
- announcements or implementation by us or our competitors of technological innovations or new products;
- the status of particular development programs and the timing of performance under specific development agreements;
- economic and stock market conditions; or
- other factors unrelated to our company or industry.

In one or more future quarters, our results of operations may fall below the expectations of securities analysts and investors and the trading price of our common stock may decline as a consequence. In addition, following periods of volatility in the market price of a company's securities, shareholders often have instituted securities class action litigation against that company. If we become involved in a class action suit, it could divert the attention of management, and, if adversely determined, could require us to pay significant damages.

#### If we fail to manage expansion effectively, our revenue and expenses could be adversely affected.

Our ability to successfully offer products and implement our business plan in a rapidly evolving market requires an effective planning and management process. We have significantly expanded

33

the scope of our operations. The growth in business and relationships with customers and other third parties has placed and will continue to place a significant strain on our management systems and resources. We will need to continue to improve our financial and managerial controls, reporting systems and procedures and will need to continue to train and manage our work force.

#### Additional risks associated with the Lumera segment.

#### We cannot be certain that our polymer materials will achieve market acceptance.

Lumera's success will depend in part on the commercial acceptance of the polymer materials technology. The optical switching industry is currently fragmented with many competitors developing different technologies. We expect that only a few of these technologies ultimately will gain market acceptance. The polymer materials may not be accepted by original equipment manufacturers and systems integrators of optical switching networks. To be accepted, the polymer material must meet the technical and performance requirements of our potential customers in the telecommunications industry. If our optical materials technology fails to achieve market acceptance, we may not be able to continue to develop the technology.

#### Our lack of the financial and technical resources relative to our competitors may affect our ability to commercialize the polymer materials.

The optical switching market is a highly competitive market. Other companies, that have substantially greater financial, technical and other resources than us, are working on competing technologies. Because of their greater resources, our competitors may develop products or technologies that are superior to our own, and may more successfully market and sell their products. These advantages may make it difficult for the polymer materials technology to become commercially viable, which could reduce the value of our business.

#### Lumera's revenues are highly sensitive to developments in the telecommunications industry.

Lumera's expected revenues will be derived from product sales to original equipment manufacturers and system integrators in the telecommunications industry. We believe that sales of potential products in this market could represent a significant portion of our future revenues. Developments that adversely affect the telecommunications sector, including delays in traffic growth, government regulation or a general economic downturn, could slow or halt our revenue growth.

We expect the current downturn in the telecommunications sector will have the following effects on Lumera:

34

- Reduced capital spending and technology investment by telecommunication companies may make it more difficult for our potential products to gain market acceptance. Customers may be less willing to purchase new technology such as ours or invest in new technology development when they have limited cash.
- Potential customers for our future products are very focused on reducing cost. This has reduced profit margins for telecommunications equipment suppliers. Therefore, our future products must compete with products that are less expensive than before the telecommunications downturn.
- The building of a high-speed telecommunications infrastructure has slowed. Currently companies are building networks using 10-gigabyte modulators, which has delayed the need for 40-gigabyte modulators. We believe that our potential products will compete more effectively with existing technologies at higher modulating speeds.

Substantially all of the Company's cash equivalents and investment securities are at fixed interest rates and, as such, the fair value of these instruments is affected by changes in market interest rates. Due to the generally short-term maturities of these investment securities, the Company believes that the market risk arising from its holdings of these financial instruments is not material. A one-percent change in market interest rates would have approximately a \$28,000 impact on the fair value of the investment securities.

The Company's investment policy restricts investments to ensure principal preservation and liquidity. The Company invests cash that it expects to use within approximately sixty days in U.S. treasury-backed instruments. The Company invests cash in excess of approximately sixty to ninety days of its requirements in high quality investment securities. The investment securities portfolio is limited to U.S. government and U.S. government agency debt securities and other high-grade securities generally with maturities of three years or less.

The weighted average maturities of cash equivalents and investment securities available-for-sale as of June 30, 2003, are as follows (dollar amounts in thousands):

	1	Amount	Percent
Cash and equivalents	\$	2,747	23.34%
Less than one year		7,994	67.92%
One to two years		1,029	8.74 %
	\$	11,770	100.00 %

Presently, all of the Company's development contract payments are denominated in U.S. dollars and, consequently, the Company believes it has no foreign currency exchange rate risk. However, in the future the Company may enter into development contracts in foreign currencies that may subject the Company to foreign exchange rate risk.

36

#### ITEM 4. CONTROLS AND PROCEDURES

Under the supervision and with the participation of our management, including our principal executive officer and principal financial officer, we have evaluated the effectiveness of the design and operation of our disclosure controls and procedures as of the end of the period covered by this report and, based on their evaluation, our principal executive officer and principal financial officer have concluded that these controls and procedures are effective. There were no changes in our internal control over financial reporting that occurred during the period covered by this report that have materially affected, or are reasonably likely to materially affect, these controls. Disclosure controls and procedures are our controls and other procedures that are designed to ensure that information required to be disclosed by us in the reports that we file or submit under the Securities Exchange Act of 1934, as amended, is recorded, processed, summarized and reported, within the time periods specified in the Securities and Exchange Commission's rules and forms. Disclosure controls and procedures include, without limitation, controls and procedures designed to ensure that information required to be disclosed by us in the reports that we file under the Securities Exchange Act is accumulated and communicated to our management, including our principal executive officer and principal financial officer, as appropriate to allow timely decisions regarding required disclosure.

37

#### PART II OTHER INFORMATION

#### ITEM 4. SUBMISSION OF MATTERS TO A VOTE OF SECURITY HOLDERS

The Company's Annual Shareholder's Meeting was held on June 24, 2003. The following proposal was introduced and voted on:

Proposal No. 1 – Election of Directors

Name	Votes For	Votes Withheld
Richard F. Rutkowski	15,410,479	1,242,068
Stephen R. Willey	16,438,540	214,007
Jacqueline Brandwynne	15,277,033	1,375,514
Jacob Brouwer	15,346,734	1,305,813
Richard A. Cowell	15,086,867	1,565,680
Walter J. Lack	16,367,073	285,474
William A. Owens	16,416,890	235,657
Robert A. Ratliffe	16,390,454	262,093
Dennis Reimer	16,390,954	261,593

In order to give shareholders an opportunity to review and act upon a change to Proposal 2, the Company adjourned the annual meeting after voting was completed with respect to Proposal 1 until July 16, 2003. On July 16, 2003, at the adjourned meeting, the following proposal was introduced and voted on:

Proposal No. 2 – Proposal to adopt and approve the Agreement and Plan of Merger with a newly-formed, wholly owned subsidiary of the Company to effect a reincorporation of the Company from the state of Washington to the state of Delaware.

For	9,441,924
Against	526,578
Abstained	86,939

38

#### ITEM 6. **EXHIBITS AND REPORTS ON FORM 8-K**

- (a) Exhibits
- 31.1 Chief Executive Officer Certification Pursuant to Rule 13a-14 of the Securities Exchange Act of 1934, as adopted pursuant to Section 302 of the Sarbanes-Oxley Act of 2002
- Chief Financial Officer Certification Pursuant to Rule 13a-14 of the Securities Exchange Act of 1934, as adopted pursuant to Section 302 Of the Sarbanes-Oxley Act of 2002

32.1	Chief Executive Officer Certification pursuant to Section 1350, Chapter 63 of Title 18, United States Code, as adopted pursuant to Section 906 of the Sarbanes-Oxley Act of 2002
32.2	Chief Financial Officer Certification pursuant to Section 1350, Chapter 63 of Title 18, United States Code, as adopted pursuant to Section 906 of the Sarbanes-Oxley Act of 2002
(b)	Reports on Form 8-K
	The Company filed the following current reports on Form 8-K during the quarter ended June 30, 2003:
	Current report on Form 8-K announcing financial results for the quarter ended March 31, 2003, as filed with the SEC on May 9, 2003.
	39

#### SIGNATURES

In accordance with the requirements of the Exchange Act, the registrant caused this report to be signed on its behalf by the undersigned, thereunto duly authorized.

MICROVISION, INC.

Date: August 14, 2003	/s/ Richard F. Rutkowski Richard F. Rutkowski Chief Executive Officer (Principal Executive Officer)
Date: August 14, 2003	/s/ Jeff Wilson Jeff Wilson Vice President, Accounting (Principal Accounting Officer)

### EXHIBIT INDEX

40

The following documents are filed.

Exhibit Number	Description
31.1	Chief Executive Officer Certification Pursuant to Rule 13a-14 of the Securities Exchange Act of 1934, as adopted pursuant to Section 302 of the Sarbanes-Oxley Act of 2002
31.2	Chief Financial Officer Certification Pursuant to Rule 13a-14 of the Securities Exchange Act of 1934, as adopted pursuant to Section 302 Of the Sarbanes-Oxley Act of 2002
32.1	Chief Executive Officer Certification pursuant to Section 1350, Chapter 63 of Title 18, United States Code, as adopted pursuant to Section 906 of the Sarbanes-Oxley Act of 2002
32.2	Chief Financial Officer Certification pursuant to Section 1350, Chapter 63 of Title 18, United States Code, as adopted pursuant to Section 906 of the Sarbanes-Oxley Act of 2002
	41

## CERTIFICATION PURSUANT TO RULE 13A-14 OF THE SECURITIES EXCHANGE ACT OF 1934, AS ADOPTED PURSUANT TO SECTION 302 OF THE SARBANES-OXLEY ACT OF 2002

- I, Richard F. Rutkowski, Chief Executive Officer and Director of the Company, certify that:
- 1. I have reviewed this quarterly report on Form 10-Q of Microvision, Inc.;
- 2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
- 3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;
- 4. The registrant's other certifying officer(s) and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) for the registrant and have:
  - a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
  - b) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
  - c) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and
- 5. The registrant's other certifying officer(s) and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):
  - a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and
  - b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

Date: August 14, 2003

/s/ Richard F. Rutkowski
Chief Executive Officer

## CERTIFICATION PURSUANT TO RULE 13A-14 OF THE SECURITIES EXCHANGE ACT OF 1934, AS ADOPTED PURSUANT TO SECTION 302 OF THE SARBANES-OXLEY ACT OF 2002

- I, Richard A. Raisig, Chief Financial Officer of the Company, certify that:
- 1. I have reviewed this quarterly report on Form 10-Q of Microvision, Inc.;
- 2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
- 3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;
- 4. The registrant's other certifying officer(s) and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) for the registrant and have:
  - a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
  - b) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
  - c) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and
- 5. The registrant's other certifying officer(s) and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):
  - a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and
  - b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

Date: August 14, 2003

Chief Financial Officer

# CERTIFICATION PURSUANT TO SECTION 1350, CHAPTER 63 OF TITLE 18, UNITED STATES CODE, AS ADOPTED PURSUANT TO SECTION 906 OF THE SARBANES-OXLEY ACT OF 2002

Pursuant to Section 1350, Chapter 63 of Title 18, United States Code, as adopted pursuant to Section 906 of the Sarbanes-Oxley Act of 2002, the undersigned, as chief executive officer of Microvision, Inc. (the "Company"), does hereby certify that to the undersigned's knowledge:

- 1) the Company's Form 10-Q for the quarterly period ended June 30, 2003 fully complies with the requirements of Section 13(a) or 15(d) of the Securities Exchange Act of 1934; and
- 2) the information contained in the Company's Form 10-Q for the quarterly period ended June 30, 2003 fairly presents, in all material respects, the financial condition and results of operations of the Company.

/s/ Richard F. Rutkowski Richard F. Rutkowski Chief Executive Officer

Dated: August 14, 2003

# CERTIFICATION PURSUANT TO SECTION 1350, CHAPTER 63 OF TITLE 18, UNITED STATES CODE, AS ADOPTED PURSUANT TO SECTION 906 OF THE SARBANES-OXLEY ACT OF 2002

Pursuant to Section 1350, Chapter 63 of Title 18, United States Code, as adopted pursuant to Section 906 of the Sarbanes-Oxley Act of 2002, the undersigned, as chief financial officer of Microvision, Inc. (the "Company"), does hereby certify that to the undersigned's knowledge:

- 1) the Company's Form 10-Q for the quarterly period ended June 30, 2003 fully complies with the requirements of Section 13(a) or 15(d) of the Securities Exchange Act of 1934; and
- 2) the information contained in the Company's Form 10-Q for the quarterly period ended June 30, 2003 fairly presents, in all material respects, the financial condition and results of operations of the Company.

/s/ Richard A. Raisig Richard A. Raisig Chief Financial Officer

Dated: August 14, 2003
